PRODUCT OVERVIEW

AI Job-Matching Workflow

A workflow that scores candidates against open roles with reasoning and drops ranked shortlists straight into the recruiter's queue.

Claude

Make

Lovable

~80%

shortlisting effort per role

Every

rank comes with explicit reasoning

Zero

inconsistent screening criteria

One

ranked shortlist per role, auto-built

THE PROBLEM

Manual screening is slow, inconsistent and undocumented

Recruiters read every resume against every open role manually — slow, inconsistent and with no record of why each candidate was advanced or rejected.

Incoming Resumes

Unstructured PDFs, no consistent extraction

Open Roles

Requirements buried in free-text job descriptions

Screening Notes

Scoring criteria varies by recruiter and mood

Recruiter Queue

No record of why a candidate was shortlisted or passed

Hours per open role
spent on manual resume triage

No shared

scoring rubric

No audit

trail on decisions

Criteria

shift per recruiter

"I can spend four hours on a role and still not be sure I've ranked them right. And the next person does it completely differently."

— Composite recruiter feedback

HOW IT WORKS

Four steps, from raw resume to ranked shortlist

01

Parse

Incoming resumes are parsed by Claude into structured candidate profiles — skills, experience, education and role signals extracted from any format.

Skills extract

Experience

Education

Role signals

02

Match

Each candidate profile is matched against the open role's requirements. Gaps and strengths are identified explicitly.

Req mapping

Gap analysis

Strength flag

03

Score

Claude scores the fit and writes a brief reasoning note — why this candidate ranks where they do, in plain language.

Fit score

Rank position

Reasoning note

04

Route

The ranked shortlist is routed into the recruiter queue via Make, ready to review in the Lovable interface.

Rank ordering

DELIVERY

Ranked shortlist · Reasoning per candidate · Recruiter queue in Lovable · One-click review

KEY FEATURES

Four capabilities that earn their place

No black-box scoring. Every feature makes the recruiter's decision faster and more defensible.

1

Resume Parsing into Structured Profiles

Claude extracts skills, experience, education and role signals from any resume format into a consistent structured profile — no template required.

Skills

Experience

Education

Signals

2

Role-by-Role Fit Scoring

Each candidate is scored against the specific role's requirements — not a generic rubric. The same candidate gets a different score for a different role.

Role-specific

Weighted gaps

3

Transparent Reasoning per Match

Every score comes with a plain-language explanation of why the candidate ranks where they do — what fits, what's missing, and what to probe in interview.

Plain language

Interview ready

4

Auto-Built Recruiter Shortlist

Make routes the ranked shortlist into the Lovable recruiter interface automatically — the queue is ready the moment the last resume is processed.

Auto-routed

Lovable queue

RESULTS & IMPACT

Three numbers that justify the build

~80%

reduction in shortlisting effort per role

Consistent

explainable ranking across every role

Recruiter

time on candidates, not triage

What this unlocks

- Recruiters start from a reasoned shortlist, not a pile of unread PDFs
- Every ranking decision is traceable and defensible — useful for compliance and feedback
- Time-to-shortlist drops significantly for high-volume roles
- Consistent criteria across all roles and all recruiters — no drift
- Scoring improves as role requirements and feedback are refined over time

"I used to spend half a day shortlisting. Now I spend twenty minutes reviewing a ranked list with reasoning. I'm actually reading the candidates, not sorting them."

recruiter feedback

Your turning point in the AI era.

**Every candidate scored.
Every rank explained.
Recruiters on the work that matters.**

The AI Job-Matching Workflow scores every candidate against every role with transparent reasoning — and routes the shortlist straight to the recruiter.

Thank you.
