

Your turning point in the AI era.

PRODUCT OVERVIEW

Account Research & Solutioning Agent

A pre-call agent that researches an account, writes the brief, and drafts a tailored solution narrative and first-cut deck for the deal team.

Claude

ChatGPT

Python

4hrs→30m

pre-meeting prep time reduction

One

consistent brief per account, every time

Zero

pitch quality variation between reps

First-cut

deck generated before the call

THE PROBLEM

Prep is slow and pitch quality varies by rep

Reps spend hours before every meeting gathering company signals and assembling a relevant pitch — and the quality of what they walk in with varies by who did the prep.

Company Signals

News, filings, LinkedIn and product pages scattered

Account Context

No consistent structure for what to capture

Solution Fit

Solution narrative written from scratch each time

Sales Deck

Deck quality depends on the individual rep's effort

4 hrs of prep before
a standard enterprise meeting

No shared

research playbook

Pitch

quality varies by rep

No draft

deck before the call

"I can spend four hours prepping for a call and still feel like I'm winging the pitch. The research is there — the narrative isn't."

— Composite enterprise rep feedback

HOW IT WORKS

Four steps, from company name to call-ready deck

01

Gather

Python pulls public signals about the target company — news, filings, LinkedIn, product pages and recent activity.

News

LinkedIn

Filings

Product pages

02

Synthesise

Claude synthesises the signals into a structured account brief: context, priorities, risks and where our solution fits.

Context

Priorities

Risk flags

03

Draft

A solution narrative is drafted, tailored to the account's specific situation and mapped to our offering.

Solution fit

Narrative map

Talking points

04

Produce

A first-cut sales deck is generated for the deal team to refine — ready before the call, not after.

DELIVERY

Account brief · Solution narrative · First-cut deck · Ready before the call

KEY FEATURES

Four capabilities that earn their place

No more blank-page prep. Every feature gets the rep to the meeting faster and better prepared.

1

Automated Account Research

Python pulls and structures public signals for any target account — news, filings, LinkedIn activity, product pages and competitive context.

News

Filings

LinkedIn

Products

2

Structured Pre-Call Brief

Claude synthesises the research into a consistent brief: account context, strategic priorities, risks and where our offering fits — same format every time.

Consistent format

Every account

3

Tailored Solution Narrative

The solution narrative is written for this account — their language, their priorities, their context — not a generic product pitch.

Account-specific

Their language

4

First-Draft Deck Generation

A first-cut sales deck is generated and ready for the team to refine — structure, narrative and talking points already in place.

Auto-generated

Team-refinable

RESULTS & IMPACT

Three numbers that justify the build

4hrs→30m

pre-meeting prep time reduction

Consistent

tailored pitches across the whole team

More

time in front of customers, less on prep

What this unlocks

- Reps walk in with a brief, a narrative and a deck — every meeting, every rep
- Pitch quality no longer depends on how much time a rep had before the call
- Deal teams refine rather than create — faster to a polished deck
- Account briefs are consistent in structure, making coaching and review easier
- Research depth improves as signal sources and prompts are refined over time

"I used to spend Sunday afternoon prepping for Monday's calls. Now I read a brief in the car park. I walk in knowing their business better than I used to after a week of prep."

more time in front of customers, less on prep feedback

Your turning point in the AI era.

Research done.

Brief written.

Deck ready.

The Account Research Agent hands every rep a structured brief, a tailored narrative and a first-cut deck — before they walk into the meeting.

Thank you.
