

Your turning point in the AI era.

PRODUCT OVERVIEW

CRM Hygiene Autopilot

An autopilot that turns call and meeting transcripts into clean CRM updates and next-step tasks — with no rep data entry.

Gong

Zapier

Konnector.io

~5 hrs

per week recovered from CRM admin per rep

Zero

rep data entry after calls or meetings

Clean

current pipeline data, not stale logs

Nothing

slips between calls and CRM

THE PROBLEM

Reps skip CRM updates and the pipeline goes stale

Reps skip CRM updates because manual logging after every call is tedious — so the pipeline data leaders rely on is stale, incomplete and unreliable.

Call Transcripts

Transcripts sitting in Gong, not in the CRM

CRM Records

Fields updated inconsistently or not at all

Pipeline Data

Pipeline stage, next steps and context missing

Follow-up Tasks

Follow-ups created manually if remembered at all

~5 hrs

per rep per week lost
to manual CRM admin after calls

Stale

pipeline data

Missed

follow-up tasks

Deals

lost between calls

"After every call I know I should update the CRM. But there are four more calls in the afternoon and it never happens. By Friday it's all guesswork."

— Composite enterprise rep feedback

HOW IT WORKS

Four steps, from transcript to clean CRM and next-step task

01

Capture

Gong captures the full transcript of every call and meeting automatically — nothing for the rep to do.

Gong capture

Auto-record

Transcript

Zapier trigger

02

Summarise

The transcript is processed into a structured summary: outcome, key commitments, objections and context.

Outcome

Commitments

Objections

03

Update

The relevant CRM fields are updated — deal stage, next action date, notes and contact details — via Konnector.io.

Field write

Stage update

Notes push

04

Create

A next-step follow-up task is created in the CRM and assigned to the rep — dated, described and ready.

Task created

Rep assigned

Dated + described

ARCHITECTURE

Gong for transcripts, wired through Zapier and Konnector.io into the CRM

TRANSCRIPTS (Gong)

Call transcript

Meeting notes

Participant data

Deal context

ORCHESTRATION (Zapier)

Triggers on call end

Routes to summary

Formats payload

Sends to CRM

CRM SYNC (Konnector.io)

Field mapping

Stage logic

Notes write

Task creation

DELIVERY

CRM fields updated · Deal stage current · Follow-up task created · Rep notified

KEY FEATURES

Four capabilities that earn their place

No post-call admin. Every feature removes a manual step from the rep's day.

1

Automatic Transcript Capture

Gong records and transcribes every call and meeting automatically. The rep ends the call and the transcript is already queued for processing.

Gong record

Auto-transcribe

No setup

Every call

2

Outcome Summaries per Interaction

Each transcript is condensed into a structured outcome summary — what was discussed, what was committed to, and what objections were raised.

Structured

Commitments logged

3

Hands-Free CRM Field Updates

Konnector.io maps the summary to the right CRM fields and writes them automatically — deal stage, next action date, notes and contact details updated without a rep touching anything.

Auto-mapped

Zero entry

4

Auto-Created Follow-Up Tasks

A next-step task is created in the CRM for every call that requires follow-up — correctly named, dated and assigned to the rep.

Auto-assigned

Dated + named

RESULTS & IMPACT

Three numbers that justify the build

~5 hrs

per rep per week recovered from CRM admin

Cleaner

current pipeline data leaders can rely on

Nothing

slips between calls and the CRM

What this unlocks

- Reps spend their time selling, not logging
- Pipeline data reflects what actually happened on every call
- Follow-up tasks exist for every deal that needs them — no gaps
- Leaders get accurate forecasting data without chasing reps for updates
- Transcript quality and field mapping improve as call patterns are refined

"I can't remember the last time I manually updated a deal. After every call it's already there."

— Composite enterprise rep feedback

Your turning point in the AI era.

**Every call logged.
Every task created.
No rep data entry.**

The CRM Hygiene Autopilot turns every call and meeting transcript into a clean CRM update and next-step task — automatically, with no rep involvement.

Thank you.
