PRODUCT OVERVIEW

Inbound Email Triage Agent

A triage agent that classifies inbound email, drafts context-aware replies, and queues CRM follow-ups for one-click approval.

Claude

n8n

HubSpot

~90%

of inbound first-response handling
automated

Faster

replies with CRM context, not cold
responses

Humans

approve instead of compose

One

click approval for reply and follow-up

THE PROBLEM

Inbound piles up before any real work can start

Inbound email piles up and someone has to read, categorise and draft a first response to each one — before any real work happens.

Inbound Email

Emails arriving faster than they can be triaged

CRM Records

Intent unclear until someone reads the whole thread

Reply Drafts

Every reply written from scratch, no CRM context

Follow-up Queue

Follow-ups missed or logged manually after the fact

Hours per week spent triaging emails before useful work begins

No CRM

context on replies

Follow-ups

logged manually

Intent

read before classifying

"I spend the first two hours every day just reading and sorting email. By the time I get to real work, half the morning is gone."

— Composite sales and ops team feedback

HOW IT WORKS

Four steps, from inbound email to approved reply

01

Screen

Each incoming email is screened and classified by intent — inquiry, complaint, renewal, spam or other — by Claude.

Intent classify

Spam filter

Priority flag

n8n trigger

02

Contextualise

The sender is matched in HubSpot and the relevant CRM context is pulled — relationship stage, history, open deals.

Contact match

Deal stage

History pull

03

Draft

A context-aware reply is drafted for the classified intent, referencing the sender's history and relevant details from the CRM.

Reply draft

Tone match

CRM context

04

Queue

The reply and a follow-up CRM task are queued for one-click human approval — approve, edit or discard.

ARCHITECTURE

Claude for classification and drafting, orchestrated with n8n and connected to HubSpot

INPUT (Inbound email)

Email inbox

Sender identity

Thread history

Attachments

ORCHESTRATION (n8n)

Triggers on receive

Routes to Claude

HubSpot lookup

Queues output

INTELLIGENCE (Claude)

Intent classify

Reply draft

Tone match

CRM context

DELIVERY

Drafted reply · CRM follow-up task · One-click approval · HubSpot updated on send

KEY FEATURES

Four capabilities that earn their place

No cold inbox triage. Every feature moves the team from composing to approving.

1

Intent Classification on Inbound Mail

Claude reads each inbound email and classifies its intent — inquiry, complaint, renewal, support or spam — before anyone on the team touches it.

Inquiry

Complaint

Renewal

Support

2

Context-Aware Reply Drafting

Replies are drafted using the sender's CRM history, relationship stage and open deals — not a generic template.

CRM context

Personalised

3

CRM Follow-Up Queuing

A follow-up task is created in HubSpot for every email that warrants one — correctly categorised, assigned and timed.

Auto-created

HubSpot native

4

Human-in-the-Loop Approval

Every reply and follow-up task goes to a one-click approval queue — humans approve, edit or discard. Nothing sends without a person in the loop.

One-click approve

Edit or discard

RESULTS & IMPACT

Three numbers that justify the build

~90%

of inbound first-response handling automated

Faster

replies with full CRM context attached

Humans

approve instead of compose

What this unlocks

- Teams spend time on responses that actually need them, not on routine triage
- Every reply uses CRM context — personalised, not templated
- Follow-up tasks created automatically — nothing falls through the gap
- HubSpot updated on every send — contact history always current
- Classification improves as intent patterns and approval feedback are refined

"I used to spend two hours every morning on email before I could start selling. Now I spend fifteen minutes approving replies that are already drafted."

— Composite sales team feedback

menler

Your turning point in the AI era.

**Every email triaged.
Every reply drafted.
Humans approve.**

The Inbound Email Triage Agent reads every email, classifies intent, drafts a context-aware reply and queues it for one-click approval — nobody composes from scratch.

Thank you.
