

Your turning point in the AI era.

PRODUCT OVERVIEW

Incident Management Auto-Sync

A no-touch sync that classifies incidents and keeps live operational dashboards current without any analyst data entry.

ServiceNow

Google Apps Script

Gemini + Data Studio

~10 hrs

per week of manual logging eliminated

Zero

analyst data entry on the sync path

Always

current dashboards, no manual refresh

One

consistent classification taxonomy

THE PROBLEM

Dashboards are only as fresh as the last manual export

Analysts manually export incidents from ServiceNow, categorise them and update dashboards — hours of repetitive logging every week that add no analytical value.

ServiceNow

Incident queue exported by hand each week

Google Sheets

Categories applied inconsistently across analysts

Data Studio

Dashboards stale until someone manually refreshes

Incident Records

Hours of logging that add no analytical value

10 hrs

per week on manual
export, categorise and dashboard updates

Stale

data between exports

Inconsistent

classifications

No audit

trail on category changes

“By Wednesday the dashboard is already showing Monday’s numbers. If something spikes Tuesday night, we’re finding out in the Friday review.”

— Composite ops manager feedback

HOW IT WORKS

Four steps, from ServiceNow queue to live dashboard

01

Connect

The ServiceNow API is connected to Google Sheets via Apps Script. New and updated incidents are pulled on a schedule.

ServiceNow API

OAuth token

Incident fields

Scheduled pull

02

Classify

Gemini classifies each incident by type and severity using the full incident description — consistently, at scale.

Type label

Severity score

Confidence

03

Refresh

Apps Script runs on a timed trigger to pull deltas and refresh the working dataset in Sheets — no manual step needed.

Timed trigger

Delta fetch

Sheet write

04

Display

Data Studio reads from the live Sheets dataset. Dashboards update automatically as new incidents land.

Live charts

Alert thresholds

Drill-through

ARCHITECTURE

ServiceNow to Google Apps Script integration with Gemini for classification, surfaced through Data Studio

SOURCE (ServiceNow API)

Incident queue

Field mapping

Delta filter

OAuth auth

PIPELINE (Google Apps Script)

Timed trigger

Fetches deltas

Writes to Sheets

Triggers Gemini

CLASSIFICATION (Gemini)

Type label

Severity score

Confidence flag

Audit trail

DELIVERY

Live Data Studio dashboard · Always-current incident data · Classified and drill-through ready

KEY FEATURES

Four capabilities that earn their place

No dashboard bloat. Every feature serves the CEO's Monday morning.

1

ServiceNow-to-Sheets API Sync

Slack, Asana, GitHub & Drive connected via MCP. No write permissions. Privacy-safe by design.

REST API

OAuth

Delta sync

Scheduled

2

Risk & Decision Ranking

Gemini classifies each incident by type and severity from the full incident description — consistent taxonomy every time, at any volume.

Type + severity

Consistent

3

Scheduled Refresh via Apps Script

Apps Script runs on a timed trigger to pull the latest deltas and update the Sheets dataset — no analyst needs to touch anything.

Timed trigger

No manual run

4

Always-Current Operational Dashboards

Data Studio reads directly from the refreshed Sheets dataset. Dashboards show current incident data at any point in the day.

Live refresh

Data Studio

RESULTS & IMPACT

Three numbers that justify the build

~10 hrs

per week of manual logging eliminated

Always

current dashboards, no manual refresh

One

consistent classification taxonomy across all incidents

What this unlocks

- Analysts redirect 10 hours a week from logging to analysis
- Dashboards reflect the current state at any point, not just after a manual update
- Incident spikes visible in near-real-time, not at the next review
- Gemini classification is consistent and auditable — no analyst variation
- Briefing improves over time as risk-ranking learns CEO's patterns

"The 15-minute brief is the one thing I read before any Monday call."

— Composite ops manager feedback

Your turning point in the AI era.

**Always live.
Always classified.
Zero manual steps.**

The Incident Management Auto-Sync connects ServiceNow to live dashboards without any analyst involvement — current data, consistent categories, every hour of the day.

Thank you.
