PRODUCT OVERVIEW

Insight-on-Demand Data Agent

A text-to-insight agent that answers plain-English business questions against the warehouse with narrated results and charts.

Claude

BigQuery

Comet

Zero

wait for leadership questions

Plain

English in, narrated insight out

Data

team freed from ad-hoc pulls

Governed

warehouse access, no raw SQL needed

THE PROBLEM

Simple questions wait days behind the data team queue

Leadership questions queue behind the data team — so a simple number takes two days to answer and the CEO's office is always waiting on a human for every insight.

Leadership Questions

Questions that need a number,
not a meeting

Data Team Queue

A data team managing a backlog
of ad-hoc pulls

Warehouse

Two-day turnaround on a simple
filter question

Ad-Hoc Requests

Raw tables returned with no
narrative or context

2 days

average wait for
a straightforward leadership question

No self-serve

analytics option

Raw tables

no narrative

Data team

on ad-hoc, not projects

"Half my questions don't need an analyst. They need someone to run a filter and tell me what it means. That shouldn't take two days."

— Composite leadership feedback

HOW IT WORKS

Four steps, from plain-English question to narrated insight

01

Ask

A plain-English business question is submitted — no SQL, no schema knowledge required from the person asking.

Business question

Natural language

No SQL needed

Any device

02

Translate

Claude translates the question into SQL scoped to the governed warehouse schema — validated before execution.

Schema map

SQL generation

Validation

03

Run

The query runs against BigQuery. Results are validated and anomalies flagged. Comet logs the run for observability.

Query execution

Result check

Comet log

04

Narrate

Claude narrates the result in plain language and generates supporting charts — no raw table handed back.

Narrated insight

Supporting charts

Drill-through

ARCHITECTURE

Claude for query generation and narration over BigQuery, with Comet for observability on every run

INPUT (Plain-English question)

Business question

Schema context

Governance rules

Prior queries

QUERY (Claude + BigQuery)

SQL generation

Schema validation

Query execution

Result return

OBSERVABILITY (Comet)

Run logging

Latency tracking

Error capture

Query audit

DELIVERY

Narrated insight · Supporting charts · Source SQL visible · Drill-through ready

KEY FEATURES

Four capabilities that earn their place

No SQL required. No waiting. Every feature puts the answer in the leader's hands directly.

1

Natural Language to SQL

Claude translates plain-English questions into SQL scoped to the governed warehouse schema — validated before execution, no schema knowledge required from the user.

NL parse

Schema map

SQL gen

Validated

2

Governed Warehouse Access

BigQuery access is governed — schema scoping, row-level security and query validation ensure leaders can ask freely without risk of data sprawl.

Schema scoped

Row-level security

3

Narrated Insights, Not Raw Tables

Results come back as narrated insights in plain language — what the number means, what changed, and what to watch — not a data dump.

Plain language

Decision-ready

4

Auto-Generated Charts

Supporting charts are generated automatically from the query results — trend lines, distributions and comparisons without any manual chart work.

Auto-generated

Any question

RESULTS & IMPACT

Three numbers that justify the build

Faster

wait for any leadership question

Data team

freed from the ad-hoc backlog

Instant

leadership decisions from better data access

What this unlocks

- Leadership asks questions in seconds and gets a narrated answer
- Data team works on analysis, not ad-hoc query requests
- Source SQL is always visible — leaders can trust and verify every number
- Comet logs every run for audit, latency tracking and error review
- SQL generation improves as query patterns and schema evolve over time

"I used to wait two days for a number I could describe in one sentence. Now I type the question and I have the answer — with a chart — before my next meeting."

Site leadership feedback

menler

Your turning point in the AI era.

**Ask a question.
Get an answer.
No waiting.**

The Insight-on-Demand Agent translates any plain-English business question into a narrated insight with charts — directly from the warehouse, instantly.

Thank you.
