PRODUCT OVERVIEW

Quote-to-Order Automation Engine

An agent that turns inbound quotes into clean, validated orders automatically — escalating only the ones that genuinely need a human.

Salesforce Agentforce

Claude

Python

~70%

of standard quotes processed untouched

Zero

order-entry errors on straight-through
quotes

Jira

stories raised only for true exceptions

One

validation pass per line item

THE PROBLEM

Every quote is hand-keyed, line by line, by ops

Ops teams manually validate catalog and pricing rules for every quote, enter orders by hand, and have no systematic way to flag errors before they ship.

Inbound Quotes

Emails and CRM entries read and re-keyed manually

Product Catalog

Hundreds of SKUs and pricing rules checked by eye

Pricing Rules

No systematic validation before order creation

CRM Orders

Errors discovered after orders are already submitted

Hours of ops time per day
spent on manual quote-to-order entry

No rule

enforcement at entry

Errors

found post-submission

No scale

path without adding headcount

"We check every line against the catalog manually. When we miss something, the error surfaces in fulfillment, not at entry."

— Composite ops manager feedback

HOW IT WORKS

Four steps, from inbound quote to clean order or escalated exception

01

Read

Inbound quotes are read from email and the CRM and parsed into structured line items by Claude.

Email intake

CRM ingest

Line parsing

Claude extract

02

Validate

Each line is validated against the product catalog and pricing rules. Mismatches are flagged immediately.

Catalog check

Pricing rules

Flag mismatch

03

Create

Quotes that pass validation are automatically converted into clean, correctly-keyed orders in the CRM.

Order creation

CRM write

Confirmation

04

Escalate

Exceptions are raised as Jira stories with the full quote context, flagged lines and suggested resolution attached.

Jira story

Full context

Assigned owner

ARCHITECTURE

Salesforce Agentforce orchestration with Claude API for extraction and validation, plus Python catalog checks

INPUTS (Email + CRM)

Email quotes

CRM opportunities

Attached PDFs

Quote history

ORCHESTRATION (Agentforce)

Triggers on ingest

Routes to Claude

Manages state

Fires actions

VALIDATION (Claude API + Python)

Line extraction

Catalog validation

Pricing check

Exception flag

DELIVERY

Clean order in CRM · Confirmation to sales · Jira story for exceptions · Full context attached

KEY FEATURES

Four capabilities that earn their place

No manual touchpoints on clean quotes. Every feature targets a failure mode in the current process.

1

Quote Parsing into Structured Line Items

Claude reads the quote from email or CRM and extracts every line item — SKU, quantity, price and terms — into a structured object.

Email

CRM

PDF

Structured

2

Catalog and Pricing-Rule Validation

Every extracted line is checked against the live product catalog and pricing rules. Mismatches, discontinued SKUs and invalid discounts are flagged before order creation.

Catalog check

Pricing rules

3

Straight-Through Order Creation

Quotes that pass validation are written directly into the CRM as clean orders — no human touch required on the standard path.

Auto-create

No manual key

4

Exception-Only Jira Stories

When a quote fails validation, a Jira story is raised automatically with the full quote, the flagged lines and a suggested resolution — ready for a human to act on.

Auto-raised

Full context

RESULTS & IMPACT

Three numbers that justify the build

~70%

of standard quotes processed untouched

Fewer

order-entry errors on straight-through quotes

Humans

focused only on true exceptions

What this unlocks

- Ops team capacity redirected from data entry to exception handling
- Errors caught at validation, not discovered in fulfilment
- Sales reps get faster order confirmation on clean quotes
- Every Jira exception arrives with full quote context — no manual re-investigation
- Straight-through rate improves as catalog and pricing rules are refined

“Seven out of ten quotes now create an order without anyone touching them. The three that need us actually need us.”

— Composite ops manager feedback

Your turning point in the AI era.

**Every standard quote processed.
Every exception surfaced.
No manual entry on the standard path.**

The Quote-to-Order Engine validates every inbound quote, creates clean orders automatically and escalates only the exceptions that genuinely need a human.

Thank you.
