PRODUCT OVERVIEW

# Research Synthesis & Insight Engine

*A research agent that reads across everything and returns a cited, contradiction-aware landscape you can actually defend.*

Claude API

Web search

Citations

**Days**

to hours per research cycle

**100%**

of claims cited to a source

**Zero**

untraceable figures in the output

**Auto**

contradiction flagging across sources

## THE PROBLEM

# Manual research is slow, siloed and hard to trust

PDFs, web data and internal reports live in separate places — with no single view of what the evidence actually says.

## PDFs & Reports

Dozens of papers and reports read manually

## Web Data

Search results with no provenance or cross-check

## Internal Docs

Internal decks with figures no one can trace

## Analyst Notes

Hand-written notes with no citation trail

**Days** typical time for a full competitive research cycle

## No single

view of evidence

## Figures

without sources

## Conflicts

never surfaced

*"We spent two days building the competitive slide. Then someone asked where the market-size figure came from, and no one could say."*

— Composite product team feedback

## HOW IT WORKS

# Four steps, from raw sources to a defensible landscape

01

## Fan out

The agent fans out in parallel across PDFs, live web search results and internal reports simultaneously.

PDF ingestion

Web search

Internal docs

Parallel fetch

02

## Extract

Claims, figures and themes are extracted from each source with a direct citation attached at point of capture.

Claim capture

Figure extract

Theme tagging

03

## Cross-check

Sources are compared against each other. Conflicting figures or claims are flagged explicitly for human review.

Source compare

Conflict detect

Flag for review

04

## Output

A structured competitor and market landscape is produced with every figure linked back to its source.

Landscape table

Citations

Conflict report

## KEY FEATURES

# Four capabilities that earn their place

No noise. Every feature serves the researcher who needs to defend their work.

1

## Multi-Source Parallel Research

PDFs, live web search and internal reports queried in parallel — one research run covers the full source set.

PDF ingestion

Web search

Internal docs

Parallel

2

## A Citation on Every Figure

Every number, claim and theme carries a direct link to the source it came from — captured at extract time, not added later.

Inline citations

Source drill-down

3

## Automatic Contradiction Flagging

When two sources disagree on a figure or claim, the conflict is flagged explicitly so a human can adjudicate.

Conflict detect

Human review

4

## Structured Landscape Output

The output is a structured competitor and market table — ready to drop into a strategy doc or board deck.

Competitor table

Market landscape

## ARCHITECTURE

# Claude API with web search and tool use, plus citation tracking across the full source set

## SOURCES (Parallel ingestion)

PDFs

Web search

Internal reports

Analyst notes

## PROCESSING (Claude API + tool use)

Claim extraction

Figure capture

Theme tagging

Citation attach

## SYNTHESIS (Cross-check + output)

Source compare

Conflict detect

Landscape draft

Citation index

## DELIVERY

Landscape table · Competitor profiles · Inline citations · Conflict report · Full source index

## RESULTS &amp; IMPACT

# Three numbers that justify the build

## Days

to hours per research cycle

## 100%

of claims cited to a source

## Auto

contradiction flagging with no manual triage

### What this unlocks

- Researchers move from reading to evaluating — not compiling
- Every figure is traceable to its source at point of capture
- Contradictions surfaced automatically so reviewers only adjudicate real conflicts
- The landscape output drops straight into a strategy doc or board slide
- Outputs are defensible by design — every claim has a source

*“We used to spend a day just validating the market-size numbers. Now that validation is built in — conflicts come to us.”*

— Composite strategy team feedback

**menler**

*Your turning point in the AI era.*

**Every source.**

**Every claim.**

**Every conflict surfaced.**

*The Research Synthesis Engine reads across your full source set and returns a cited, contradiction-aware landscape you can actually defend.*
