PRODUCT OVERVIEW

SOP Automation Suite

A single audit-ready agent that runs the standard operating procedures a team used to handle with a stack of manual checklists.

Agentic design

Cowork

MCP

8-12 hrs

per manager per week reclaimed

6

manual checklists replaced

Zero

exceptions dropped silently

One

audit trail for every action

THE PROBLEM

Ops runs on brittle checklists, and exceptions slip through

Support and operations each have their own manual checklists — with no shared view, no automatic escalation, and no audit trail.

Support Tickets

Six separate checklists handled manually

Ops Requests

No routing to the right owner by default

Escalation Rules

Exception rules live in people's heads

Audit Requirements

Compliance asks for logs that don't exist

6

manual checklists across
support and ops teams

No shared

source of truth

Exceptions

slip through silently

No clean

audit trail

"We had a compliance review and couldn't produce a log of who handled what. The process existed — the evidence didn't."

— Composite ops manager feedback

HOW IT WORKS

Four steps, from incoming request to logged outcome

01

Intake

Requests arrive from support and ops channels via MCP. The agent picks them up as they come in.

Support channel

Ops channel

Email intake

API intake

02

Triage

Each request is matched against the relevant SOP. The agent identifies the correct handler and the required steps.

SOP match

Handler route

Priority score

03

Handle

Routine requests are handled end-to-end. Exceptions are escalated immediately with full context attached.

Routine handle

Exception flag

Context attach

04

Log

Every action — intake, decision, escalation and resolution — is written to an immutable audit log.

Audit entry

Escalation alert

Resolution log

KEY FEATURES

Four capabilities that earn their place

No complexity added. Every feature removes a manual step.

1

One Agent, Six Checklists Gone

A single agentic workflow replaces all six manual checklists across support and ops — consistent behaviour every time.

Support SOP

Ops SOP

Escalation

Exceptions

2

Rule-Based Routing

Each request is matched to its SOP and routed to the right owner automatically — no manual triage needed.

SOP matching

Auto-routing

3

Exception Escalation with Context

When a request falls outside the SOP, it is escalated to the right person with the full request context already attached.

Full context

Instant escalate

4

Audit Log for Every Action

Every intake, routing decision, escalation and resolution is written to an immutable log — ready for compliance review.

Immutable log

Compliance-ready

ARCHITECTURE

Agentic design with Cowork for orchestration and MCP into support and ops systems

INPUTS (MCP connectors)

Support tickets

Ops requests

Email intake

API triggers

ORCHESTRATION (Cowork)

Schedules agent runs

Passes request context

Handles retries

Triggers escalations

AGENT (SOP logic + escalation)

SOP matching

Exception detect

Handler routing

Audit write

DELIVERY

Handled request · Escalation alert · Resolution confirmation · Audit log entry

RESULTS & IMPACT

Three numbers that justify the build

8-12 hrs

per manager per week reclaimed

Fewer

exceptions dropped or handled late

Clean

audit trail ready for compliance review

What this unlocks

- Managers spend their time on decisions, not checklists
- Exceptions reach the right owner with full context — not a bare notification
- Consistent SOP execution every time — no variation between agents
- Compliance reviews become a log export, not an investigation
- Six checklists, one agent, one place to audit

"We had the same compliance finding two years in a row because there was no log. Now the audit trail writes itself."

— Composite ops manager feedback

Your turning point in the AI era.

**Every request handled.
Every exception escalated.
Every step logged.**

The SOP Automation Suite replaces manual checklists with a single audit-ready agent that handles the routine and surfaces what needs a human.

Thank you.
