BEFORE YOU START

How to use this playbook.

Every prompt in this library is built on the same principle: the more specific and contextual your instruction, the more useful the response. Each card gives you a ready-to-use prompt with [VARIABLES] you fill in before sending, a brief explanation of why the prompt is structured the way it is, and the specific situation where it works best. Copy any prompt directly into Claude, swap the bracketed placeholders for your real context, and you will get a result you can actually use.

THE [VARIABLE] SYSTEM

- [YOUR TOPIC] – Replace with the specific subject, question, or area you are focused on.
- [YOUR ROLE] – Replace with your job title, context, or how you want Claude to frame you.
- [YOUR AUDIENCE] – Replace with exactly who will read or receive the output.
- [YOUR GOAL] – Replace with the one outcome you need from this interaction.
- [CONTEXT] – Replace with background, constraints, or details Claude needs to know first.

Be specific. Always.

Generic variables produce generic output. Instead of [YOUR TOPIC] = "marketing", write "Instagram content strategy for a sustainable fashion brand targeting Indian women aged 25-35". The prompt stays the same. The specificity of your variable changes everything.

Iterate inside the same conversation.

After Claude responds, keep going. Say "make it 30% shorter", "use a more direct tone", "give me 3 alternatives to the opening line". The best output is rarely the first. Think of the first response as a first draft.

Chain prompts for complex tasks.

Use a research prompt first, then a writing prompt on the output, then an editing prompt. A prompt library is not a vending machine — it is a thinking system where each prompt builds on the last.

WHAT IS INSIDE

01	Writing & Communication	10	Emails, messages, reports, rewrites, tone, announcements
02	Work & Productivity	10	Planning, decisions, meetings, summaries, SOPs, focus
03	Learning & Research	10	Concepts, study guides, research, quizzes, mental models
04	Career & Growth	10	CV, cover letters, interviews, LinkedIn, salary, promotions
05	Business	10	Validation, pitches, plans, pricing, competition, proposals
06	Marketing & Content	10	Captions, hooks, ad copy, campaigns, newsletters, scripts
07	Finance & Money	10	Budgeting, planning, debt, investing, freelance, review
08	Health & Wellbeing	10	Meal plans, fitness, habits, sleep, stress, energy
09	Personal Life	10	Decisions, conversations, travel, goals, growth, routines
10	Creative & Fun	10	Stories, poems, games, gifts, challenges, collaboration

DOMAIN

01

Writing & Communication

10 prompts for emails, messages, reports, rewrites, tone fixes, and saying exactly what you mean.

1

The Difficult Email

Writing

Write a professional email to [RECIPIENT — their role and relationship to you] about [SENSITIVE TOPIC]. Context: [2-3 sentences explaining what has happened so far and what is at stake]. The outcome I need from this email: [SPECIFIC RESULT]. Tone: direct, respectful, and solution-focused. Keep it under 180 words. Do not use passive voice, corporate filler phrases like "I hope this finds you well", or any language that softens accountability.

Why it works: *Specifying the desired outcome and banning passive voice forces Claude to write with intention rather than producing polite noise that obscures the actual message.*

Best for: Delivering feedback, raising a difficult issue, addressing a conflict, or communicating something important where the tone matters as much as the content.

2

Follow-Up That Gets a Reply

Writing

Write a follow-up message to [NAME — their role] who has not replied to my message about [TOPIC]. It has been [NUMBER] days. My last message said: [ONE LINE SUMMARY OF WHAT YOU SENT]. The one thing I need them to do is: [SPECIFIC ASK]. Make it warm, concise, and end with a single clear call to action that requires minimal effort to respond to. Under 100 words. Do not apologise for following up.

Why it works: *Banning the apology removes the self-undermining phrase most follow-ups open with. One specific low-effort ask prevents the ambiguity that allows people to defer indefinitely.*

Best for: Sales follow-ups, client nudges, chasing approvals, or getting a response to any important message that has gone unanswered after 48 hours or more.

3

Rewrite My Draft

Writing

Rewrite the following text to be clearer, more concise, and more confident. Rules: keep all original meaning intact and do not add new information; cut any redundant phrases or filler words; fix any passive voice; if something in the original is ambiguous, note it at the end rather than inventing a meaning. Here is the draft: [PASTE YOUR TEXT]. After the rewrite, list the 3 most significant changes you made and why.

Why it works: *The list of three changes makes the editing transparent, so you can learn from the rewrite rather than just accepting it — building your own editing instincts over time.*

Best for: Cleaning up any rough draft before sending — emails, reports, proposals, messages, or any written communication where the first version feels weak or overcomplicated.

4

Change the Tone

Writing

Rewrite the following text in a [CHOOSE ONE: formal / casual / warm / assertive / empathetic / concise / conversational] tone. Keep the content and meaning completely identical — only the tone and word choices should change. Do not add or remove any information. After the rewrite, write two sentences: one explaining the main tonal shift you made, and one on what you would change if the tone needed to shift one step further in the same direction. Original text: [PASTE TEXT]

Why it works: The "one step further" prompt creates a tonal spectrum rather than a binary shift — useful when the rewrite is close but not quite right, saving another round of prompting.

Best for: Adapting one piece of writing for different audiences, platforms, or relationships — the same message to a client versus a colleague versus a senior executive.

5

Plain English Explainer

Writing

Explain [COMPLEX TOPIC, DOCUMENT, OR CONCEPT] in plain English for an audience with no background in this field. Rules: no jargon, no acronyms without immediate explanation, no assumption of prior knowledge. Use one concrete analogy that mirrors the actual mechanism, not just a surface similarity. Keep it under 200 words. End with three things: (1) the one thing the reader must remember; (2) the one question they should ask next; (3) one common misconception about this topic.

Why it works: The misconception prompt is what separates a good explainer from a great one — it pre-empts the wrong conclusions a new reader is likely to draw on their own.

Best for: Summarising policy documents, legal text, technical reports, medical information, financial products, or any dense material for a non-expert audience who needs to make a decision.

6

Announcement That Gets Read

Writing

Write an internal announcement for [TEAM / COMPANY / GROUP] about [NEWS, CHANGE, OR UPDATE]. Lead with the most important information in the first sentence — no preamble, no build-up. Then cover: what is changing, why it is changing, what it means for the reader specifically, and what they need to do (if anything). Tone: clear, direct, and human. Under 180 words. No corporate jargon. If there are questions people will predictably ask, address the top two in a brief FAQ after the main announcement.

Why it works: The predictable FAQ pre-empts the reply-all thread — it saves time for everyone and signals that the communicator has actually thought about the reader's experience.

Best for: Team updates, policy changes, process shifts, product launches, or any organisational news where people need to understand the impact on them specifically, not just the general fact.

7

Professional Bio

Writing

Write a [SHORT: 60-word / MEDIUM: 120-word / LONG: 200-word] third-person professional bio for [YOUR NAME], [ROLE] at [COMPANY OR CONTEXT]. Include: [2-3 SPECIFIC ACHIEVEMENTS OR SKILLS — be precise, not generic]. Purpose: [WHERE THIS WILL BE USED]. Audience: [WHO WILL READ IT]. Tone: [confident / approachable / formal / warm]. After the bio, write a one-sentence version I can use in a speaker introduction or email signature. Avoid generic phrases like "passionate about", "results-driven", and "thought leader".

Why it works: *The one-sentence version is often the most useful output — it produces the distilled form most people never have ready when they need it at short notice.*

Best for: LinkedIn About sections, conference speaker bios, website about pages, press kits, podcast introductions, or any situation where you need to introduce yourself in writing at different lengths.

8

The Complaint That Wins

Writing

Write a formal complaint letter to [COMPANY / PERSON / DEPARTMENT] about [ISSUE]. What happened: [DESCRIBE THE EVENTS IN ORDER — dates, amounts, and names if relevant]. The impact on me: [PRACTICAL AND FINANCIAL IMPACT]. The resolution I want: [BE SPECIFIC — refund, replacement, apology, policy change, etc.]. Relevant regulation or consumer right if applicable: [PASTE OR DESCRIBE]. Tone: calm, factual, and firm. No emotional language. Under 280 words. End with a specific, reasonable deadline for their response and a statement of my next step if they do not respond.

Why it works: *A stated next step gives the letter teeth — it signals that this will escalate, which is what transforms it from a complaint into a negotiation with consequences.*

Best for: Customer complaints, service failures, billing disputes, insurance claims, or any situation where a firm, well-structured professional letter is the right tool for getting a resolution.

9

Meeting Summary

Writing

Convert the following meeting notes into a structured summary with exactly three sections: (1) DECISIONS MADE — a bullet list of every decision reached, including the owner if named; (2) ACTION ITEMS — each formatted as [verb] + [what] + [who is responsible] + [deadline if stated or implied]; (3) OPEN QUESTIONS — anything unresolved that needs a follow-up, with the person who should answer it. After the three sections, write one sentence on the biggest risk if none of the action items are followed up. Notes: [PASTE NOTES]

Why it works: *The biggest risk sentence is the closing line that turns a meeting summary into a document people actually act on — it makes the cost of inaction visible.*

Best for: After any meeting where notes exist but need to be converted into something actionable. Especially useful for meetings with mixed attendance or where decisions were buried in discussion.

10

Thank You That Sounds Human

Writing

Write a genuine thank-you message to [PERSON OR TEAM] for [SPECIFIC THING THEY DID — describe it precisely, not vaguely]. The relationship: [HOW YOU KNOW THEM]. Where this will be sent: [EMAIL / HANDWRITTEN NOTE / SLACK / LINKEDIN]. Length: 4-5 sentences. Rules: be specific enough that this message could not be sent to anyone else without changing it; name at least one concrete detail about what they did; avoid any clichés such as "means the world to me" or "I truly appreciate it"; close with something forward-looking rather than just a sign-off.

Why it works: *The forward-looking close is what makes a thank-you feel like the beginning of an ongoing relationship rather than a transaction being closed.*

Best for: Post-interview thank yous, team recognition, client appreciation, mentorship acknowledgement, or any moment where a thank-you needs to land as something more than a social formality.

DOMAIN

02

Work & Productivity

10 prompts for planning, decisions, meeting prep, task management, and getting more done with less friction.

11 Prioritise My Task List

Work

Here is my complete task list for today or this week: [PASTE YOUR LIST]. For each task, evaluate it on two dimensions: effort required (Low / Medium / High) and impact if done well (Low / Medium / High). Present the evaluation as a table, then give me a final prioritised order from most to least important with a one-sentence rationale for each ranking. At the end, flag (1) anything I should consider delegating and why, and (2) anything I should consider dropping entirely and what I risk if I do not.

Why it works: Separating effort from impact reveals tasks that feel important because they are hard but actually create little value — the matrix makes that visible before you commit your time.

Best for: Start of any workday or week when the list is longer than realistically completable and you need to make deliberate choices before diving in.

12 Make a Decision

Work

I need to decide between [OPTION A — describe it in detail] and [OPTION B — describe it in detail]. Context: [EXPLAIN THE SITUATION, WHAT IS AT STAKE, AND WHAT I HAVE ALREADY TRIED OR CONSIDERED]. The most important factor for me is: [YOUR PRIORITY]. Give me: (1) the three most important factors I should weigh, regardless of what I said my priority is; (2) what information I am likely missing that could change this decision; (3) the decision I should probably make and why — be direct, do not hedge.

Why it works: Asking what information is missing is the most valuable prompt in any decision conversation — it surfaces the blind spots you cannot see from inside the decision.

Best for: Any significant decision where you have been going back and forth, where the stakes are meaningful, or where you need a clear outside perspective before committing.

13 Summarise a Document

Work

Summarise the following document in this exact format: (1) THE MAIN ARGUMENT — one sentence only, capturing the central claim or purpose; (2) THREE KEY POINTS — bullet list, max 15 words each; (3) WHAT IS MISSING OR UNCLEAR — anything the document fails to address that it probably should; (4) THE IMPLIED ACTION — one sentence on what this document suggests someone should do next; (5) RELIABILITY FLAG — note anything that looks like an unsupported claim, outdated data, or a significant assumption. Document: [PASTE TEXT]

Why it works: The reliability flag turns passive summarisation into critical reading — it is the output that distinguishes someone who processes information from someone who just passes it along.

Best for: Reports, strategy documents, long emails, research papers, or any content you need to understand quickly and then brief others on accurately.

14 Weekly Plan

Work

Help me plan my week. Single most important goal this week: [GOAL]. Fixed commitments I cannot move: [LIST WITH APPROXIMATE TIMES AND DAYS]. My most productive hours of the day: [WHEN YOU FOCUS BEST]. Biggest risk to this week succeeding: [DISTRACTION, DEPENDENCY, OR UNCERTAINTY]. Energy level at the end of last week: [LOW / MEDIUM / HIGH]. Design a day-by-day plan Monday through Friday with one primary focus task per day, one thing to protect at all costs, and one thing I should say no to this week.

Why it works: The "one thing to say no to" is the hardest and most useful output — it names the specific commitment or temptation that is most likely to derail the primary goal.

Best for: Sunday evening or Monday morning planning, especially during high-stakes weeks when the gap between a reactive and intentional approach to the day makes a significant difference.

15 Meeting Prep Brief

Work

I have a [LENGTH]-minute meeting with [WHO — role and relationship] about [TOPIC]. My goal for this meeting: [WHAT YOU WANT TO ACHIEVE OR DECIDE]. What I know about their likely priorities or concerns: [WHAT YOU KNOW OR SUSPECT]. My main concern going in: [YOUR WORRY OR CHALLENGE]. Give me: (1) the 3 most important questions I should ask; (2) the 2 things I should be prepared to answer; (3) 1 risk to watch for during the conversation; (4) the exact sentence I should open with to frame the meeting toward my goal from the start.

Why it works: The opening sentence is the highest-leverage output — it sets the direction of the entire meeting before the other person has a chance to redirect or control the framing.

Best for: Important meetings, negotiations, client calls, performance conversations, or any interaction where going in unprepared is a meaningful risk to the outcome.

16 Brainstorm Without Limits

Work

I need creative ideas for [CHALLENGE, OPPORTUNITY, OR GOAL]. Context: [2-3 SENTENCES OF BACKGROUND]. Constraints I am working within: [BUDGET / TIME / RESOURCES / TECHNOLOGY / AUDIENCE]. Give me 14 ideas. In the first pass, do not filter for feasibility — include bold, counterintuitive, and even slightly impractical ideas alongside realistic ones. Label each with: effort (Quick / Medium / Complex) and a one-word description of the approach (e.g. Partnership, Technology, Behaviour, Design). After all 14, shortlist the 3 with the best potential and explain why.

Why it works: The approach label and shortlist with reasoning converts a brainstorm from a list you still have to evaluate into a ready-to-use starting point for the next conversation.

Best for: Problem-solving sessions, new initiative planning, creative blocks, or any moment when you have been thinking too narrowly or conventionally for too long.

17 Write an SOP

Work

Write a clear, step-by-step Standard Operating Procedure for [PROCESS OR TASK]. It should be detailed enough for someone doing this for the first time to follow without asking questions. Structure: (1) PRE-CONDITIONS — what must be true or ready before starting, including who has access to what; (2) STEPS IN ORDER — numbered, each one a single clear action with no ambiguity; (3) DECISION POINTS — where the process might branch, with what to do in each case; (4) WHAT GOOD LOOKS LIKE — how to verify the process has been completed correctly; (5) COMMON MISTAKES — the top 2-3 errors people make and how to avoid them.

Why it works: *Common mistakes is the section that turns an SOP from a document people read once into one they refer back to — it addresses real failure modes rather than ideal conditions.*

Best for: Any repeatable process that needs to run without your direct involvement, or that you are handing off to a new person, team, or system.

18 Honest Feedback on My Plan

Work

Here is my plan for [PROJECT, GOAL, OR INITIATIVE]: [PASTE YOUR PLAN IN FULL]. I want direct, honest feedback from the perspective of someone who has seen many similar plans succeed and fail. Tell me: (1) what is genuinely strong and why it is likely to work; (2) the single weakest element — what specifically makes it weak, not just that it is weak; (3) what I have missed or significantly underestimated; (4) the one question I should be able to answer before proceeding that I currently cannot; (5) the overall verdict — proceed, revise, or reconsider. Do not soften. I would rather hear this now.

Why it works: *The overall verdict forces a clear recommendation rather than leaving you with a balanced list to weigh — it is the output of an actual advisor, not a consultant covering their bases.*

Best for: Before presenting a plan to decision-makers, before starting significant work, or whenever you have been too close to something and need someone to tell you what you cannot see.

19 Turn Notes into Actions

Work

Convert the following rough notes into a clean, usable action list. Every item must: start with a specific action verb (Write, Call, Send, Book, Review, Confirm, etc.), name the owner if mentioned in the notes, include a deadline if mentioned or implied, and be a single completable action — not a category or theme. After the list, add two things: (1) items where the owner or deadline is missing and who should clarify; (2) any item that might actually be a project requiring its own sub-actions. Notes: [PASTE NOTES]

Why it works: *Distinguishing single actions from hidden projects prevents the common failure mode where a task appears on the list but never gets done because it is actually ten tasks in a trench coat.*

Best for: After meetings, workshops, brainstorming, or any session that generated ideas and commitments that need to be converted into something a team can act on.

20

End-of-Week Reflection

Work

Guide me through a structured end-of-week reflection. Ask me these 6 questions one at a time, waiting for my full answer before continuing: (1) What was the single most important thing I accomplished this week? (2) What did not get done, and what was the real reason? (3) Where did I spend time that did not align with my priorities? (4) What decision did I make this week that I would make differently? (5) What is the one thing that, if it continued, would concern me about the next month? (6) What do I want next week to be defined by? After all 6 answers, give me a 4-bullet summary of the patterns you notice across my answers.

Why it works: *The pattern summary after six answers is where the real insight lives — repetitions and contradictions across answers reveal things that individual answers alone do not.*

Best for: Friday afternoon or Sunday reviews, personal performance tracking, or any moment when you want deliberate learning from the week rather than just moving on to the next one.

DOMAIN

03

Learning & Research

10 prompts for understanding concepts faster, studying smarter, and building knowledge that actually sticks.

21 Explain It Simply

Learning

Explain [CONCEPT, TOPIC, OR IDEA] to me as if I have no background in this field. Use one concrete real-world analogy that mirrors the actual mechanism — not just a surface similarity. Keep the core explanation under 200 words. Then give me: (1) the one thing most people misunderstand about this, and why they get it wrong; (2) the one follow-up question that would take my understanding meaningfully deeper; (3) a real-world situation where understanding this correctly would change what someone decides or does.

Why it works: *The real-world situation prompt converts conceptual understanding into applicable knowledge — it bridges the gap between knowing something and knowing when it matters.*

Best for: Learning anything new — a concept, technology, discipline, or field you are entering for the first time and need to orient yourself quickly and accurately.

22 Teach Me Step by Step

Learning

Teach me [SKILL OR TOPIC] from the very beginning. My current level: [COMPLETE BEGINNER / I HAVE SOME BACKGROUND — describe exactly what you know]. My goal: [WHAT YOU WANT TO BE ABLE TO DO]. My learning constraint: [TIME AVAILABLE PER WEEK OR ANY SPECIFIC CHALLENGE]. Teach me one concept or skill at a time. After each step, ask me one question to check understanding before continuing. If I get it wrong, rephrase and try again. If I get it right, connect it to what comes next before moving on. Start with step one now.

Why it works: *Connecting each correct answer to what comes next builds the mental scaffolding that converts sequential knowledge into a structure the learner can navigate independently.*

Best for: Picking up any skill that builds on itself — coding, finance, statistics, design, a new language — where skipping or misunderstanding foundations creates compounding problems later.

23 Quiz Me

Learning

Quiz me on [TOPIC]. I am preparing for [EXAM / INTERVIEW / PRESENTATION / my own understanding]. Give me one question at a time. After each answer: (1) tell me whether it is correct and what the correct answer is; (2) explain the reasoning, not just the fact; (3) give me one related question I should be able to answer if I truly understand this — ask it only if my previous answer shows genuine understanding. Start easy and progress in difficulty as I demonstrate competence. Begin now.

Why it works: *The conditional follow-up question adapts to your actual performance rather than following a fixed path — it produces a diagnostic experience, not just a test.*

Best for: Exam preparation, interview practice, certification study, or any situation where knowing what you actually know versus what you think you know is the critical variable.

24 Compare Two Things

Learning

Compare [THING A] and [THING B] systematically. Use a table with columns: Dimension, [THING A], [THING B], Better For (or "Depends"). Cover at least 6 meaningful dimensions relevant to someone choosing between them. After the table: (1) write a paragraph on when you would choose each, framed around specific situations; (2) identify the one factor that, in practice, determines most decisions between these two; (3) describe one scenario where the obvious choice is actually the wrong one.

Why it works: *The scenario where the obvious choice is wrong is the output that makes this comparison genuinely educational rather than just a reference — it builds judgment, not just knowledge.*

Best for: Choosing between tools, frameworks, approaches, strategies, products, or any two options where a systematic comparison prevents you from choosing purely on familiarity or reputation.

25 Book or Article Summary

Learning

Summarise [TITLE — or paste the text]. Use this structure: (1) THE CENTRAL ARGUMENT — one sentence; (2) THE THREE MOST IMPORTANT IDEAS — each with a 2-3 sentence explanation; (3) THE STRONGEST EVIDENCE OR EXAMPLE the author uses to support the main claim; (4) THE WEAKEST POINT OR BIGGEST GAP — where the argument is least convincing or most incomplete, and why; (5) ONE THING I CAN APPLY THIS WEEK — specific and actionable, not a general principle; (6) WHO SHOULD READ THIS AND WHO SHOULD NOT.

Why it works: *The "who should not read this" output is unusual and valuable — it forces an honest assessment of the audience fit rather than universal recommendation.*

Best for: Processing non-fiction books, research papers, long-form articles, or any substantive content you want to convert from reading material into retained and applicable knowledge.

26 Build a Study Plan

Learning

Build a [NUMBER]-week study plan for [TOPIC, EXAM, OR SKILL]. My current level: [DESCRIBE WHAT YOU KNOW AND WHERE YOUR GAPS ARE]. Time available per week: [REALISTIC HOURS]. Deadline or goal: [SPECIFIC DATE, EXAM, OR TARGET]. Resources I have access to: [BOOKS, COURSES, TOOLS — or say "help me identify them"]. Give me a week-by-week plan with: the specific topics for each week, the best format for each (reading, video, practice problems, project, or discussion), and one active practice task per week that forces application rather than just consumption.

Why it works: *Active practice tasks that force application are the mechanism that converts study time into retained capability — the difference between understanding something and being able to use it under pressure.*

Best for: Exam preparation, certification study, learning a language, building a technical skill, or any structured goal where a plan is the difference between progress and procrastination.

27 Find My Knowledge Gaps

Learning

I believe I understand [TOPIC] well enough to [USE IT IN CONTEXT / TEACH IT / BE TESTED ON IT]. Ask me 7 questions specifically designed to expose gaps in my understanding — including areas where shallow knowledge would produce a confident but incorrect answer. Ask one question at a time. After all 7 answers, give me: (1) what I clearly understand well; (2) where I have surface knowledge but not deep understanding; (3) where I have genuine gaps; (4) the one concept I should prioritise studying before I claim competence. Begin with question one.

Why it works: Questions designed to expose overconfidence target the exact gap between "I know this" and "I can apply this correctly under real conditions" — the gap that matters most in high-stakes situations.

Best for: Before job interviews, presentations, client conversations, exams, or any high-stakes situation where you need to be honest about the difference between familiarity and genuine competence.

28 Research Summary

Learning

Give me a research summary on [TOPIC]. Organise it in five sections: (1) ESTABLISHED — what is known with high confidence and broad agreement among experts; (2) DEBATED — where credible experts disagree and what the core dispute is about; (3) EMERGING — what is gaining traction but not yet settled; (4) UNKNOWN — what remains genuinely unanswered or understudied; (5) WHAT TO KNOW — the three most important things to understand about this topic if you only have 10 minutes. After the summary, list two high-quality sources worth reading if I want to go deeper.

Why it works: Separating established from debated from emerging prevents the common error of treating all information as equally reliable — which is where most research misunderstanding begins.

Best for: Getting up to speed on any topic before a meeting, project, interview, or conversation where you need to understand the landscape without reading everything available yourself.

29 Create Flashcards

Learning

Create 15 flashcards for [TOPIC]. Format each as: FRONT: [A specific question or scenario that tests active recall — not "what is X" but "when would you use X" or "what goes wrong if X is missing"]. BACK: [The answer in under 35 words — precise and specific, not a general principle]. Requirements: every question must require a specific answer; at least 5 must be application questions that test whether you can use the knowledge, not just recall it; no two questions should test the same underlying concept. After all 15, tell me the 3 that are most likely to be tested in [EXAM / INTERVIEW / REAL-WORLD USE].

Why it works: Application questions test transfer of knowledge — the level of understanding needed to perform under real conditions rather than just recognise a correct answer in a multiple-choice question.

Best for: Exam preparation, certification study, onboarding to a new role or domain, language learning, or any situation requiring reliable recall of specific knowledge under time pressure.

30

Give Me a Mental Model

Learning

Give me a powerful mental model for thinking about [PROBLEM, DOMAIN, OR RECURRING CHALLENGE]. Cover: (1) what the model is in one sentence; (2) the mechanism — how it works and why it is useful; (3) a concrete example applied in [CONTEXT RELEVANT TO ME]; (4) a counter-example — a situation where this model produces the wrong answer or leads to a poor decision; (5) the questions you should ask to know whether this model applies to the situation you are in; (6) what mental model is most often confused with this one and how to tell them apart.

Why it works: *The confusion with similar models is the advanced output — it builds the discrimination ability that separates genuine expertise from pattern-matching on surface features.*

Best for: Building a thinking toolkit for recurring decisions, understanding a domain structurally rather than factually, or developing judgment that holds up under unfamiliar conditions.

DOMAIN

04

Career & Professional Growth

10 prompts for CVs, interviews, LinkedIn, negotiation, career moves, and building a professional reputation that opens doors.

31 Rewrite My CV Bullet

Career

Rewrite the following CV bullet point to be stronger, more specific, and outcome-focused. Use this structure: [Strong action verb] + [what you did and how] + [measurable result or quantified impact]. If the original does not include a number, suggest the most plausible and defensible figure based on the context and flag it clearly so I can verify. Produce two versions: one that leads with the action, one that leads with the result. Here is my current bullet: [PASTE BULLET]. After both rewrites, tell me which is stronger for [INDUSTRY / ROLE] and why.

Why it works: Two versions with different structures give you something to compare — the choice between them often reveals what you want to emphasise, which itself clarifies your positioning.

Best for: Updating your CV before any job application, building a portfolio of achievements, or preparing for a performance review where documented impact is what drives the conversation.

32 Tailored Cover Letter

Career

Write a cover letter for the role of [JOB TITLE] at [COMPANY]. The role requires: [PASTE 3-4 OF THE MOST RELEVANT REQUIREMENTS FROM THE JOB DESCRIPTION]. My most relevant experience and evidence: [2-3 SPECIFIC EXAMPLES — not just claims]. What I find genuinely interesting about this role or company (be specific — research if needed): [YOUR REAL REASON]. Tone: professional but human — not stiff and not sycophantic. Exactly 3 short paragraphs. Do not open with "I am writing to apply for." The first sentence must make the hiring manager want to read the second.

Why it works: A strong first sentence is the single highest-leverage improvement in any cover letter — most are rejected in the first two lines. The constraint forces something better.

Best for: Any job application where your CV gets you through the door but the cover letter is where you actually make a case for why you over someone equally qualified on paper.

33 Interview Answer — STAR

Career

Help me craft a strong STAR-format answer for this interview question: [QUESTION]. Experience I can draw from: [DESCRIBE THE SITUATION AND WHAT YOU DID IN 3-4 SENTENCES]. Build the full STAR answer: Situation (set the context and stakes clearly), Task (your specific role and what was expected), Action (what you did, step by step, and why), Result (quantified outcome if possible, and what you personally learned). Then: (1) write a 20-word version I can use as an opening line before telling the full story; (2) identify the one weak point in my experience as I described it and how to address it honestly.

Why it works: Identifying the weak point in your own answer is what distinguishes preparation from performance anxiety — knowing the gap lets you address it proactively rather than being caught by it.

Best for: Preparing for competency-based, behavioural, or situational interview questions at any seniority level or industry.

34

Mock Interview

Career

Conduct a mock interview with me for the role of [JOB TITLE] at a [INDUSTRY / COMPANY TYPE]. Mix question types across the session: 2 competency-based (tell me about a time), 1 situational (what would you do if), 1 technical or role-specific, and 1 motivation question. Ask one question at a time. After each answer: tell me what worked well, what was missing or unconvincing, and give me one specific line or addition that would have strengthened my answer. Then ask the next question. Begin.

Why it works: One specific improvement line per answer is far more useful than general feedback — it gives you something concrete to incorporate immediately in the real interview.

Best for: Preparing for any important job interview, especially one in a new industry, at a senior level, or for a role you have not interviewed for before.

35

LinkedIn About Rewrite

Career

Rewrite my LinkedIn About section to be more compelling, specific, and human. Current version: [PASTE YOUR CURRENT ABOUT]. Audience I want to attract: [BE SPECIFIC — who do you want reading this and what do you want them to do]. Three words that describe how I want to come across: [YOUR WORDS]. My most important professional achievement that is not obvious from my job titles: [ONE SENTENCE]. Under 220 words. Write two versions: one more direct and punchy, one warmer and story-led. No "I am passionate about", "results-driven", or "I help [X] achieve [Y]" opener.

Why it works: Two tonal versions let you choose based on your actual voice rather than accepting the first interpretation — the one that sounds more like you will perform better because it is more consistent across your profile.

Best for: Any time your LinkedIn is not reflecting where you are now or where you want to go next, or when the right people are not finding or reaching out to you.

36

Salary Negotiation Script

Career

Help me prepare a salary negotiation for: Role: [JOB TITLE]. Offer: [AMOUNT, BENEFITS, AND ANY FLEXIBILITY SIGNALS THEY GAVE]. My target: [YOUR NUMBER AND WHY YOU BELIEVE IT IS JUSTIFIED]. My leverage: [COMPETING OFFERS, MARKET DATA, SPECIFIC SKILLS, OR TIMELINE CONSTRAINTS]. Give me: (1) the exact opening line to begin the negotiation; (2) how to respond if they say the budget is fixed — two versions: one if I am flexible on other terms, one if salary is the non-negotiable; (3) what to ask for if base salary truly cannot move; (4) the one thing I should not say under any circumstances and why.

Why it works: Knowing what not to say is as valuable as knowing what to say — it prevents the specific mistakes that most people make when the conversation gets uncomfortable.

Best for: Job offer negotiations, annual salary reviews, or rate increases as a freelancer or contractor — especially in situations where the first offer was below your target.

37

Skills Gap Analysis

Career

I am currently a [CURRENT ROLE / LEVEL] and want to move to [TARGET ROLE / LEVEL / COMPANY TYPE] within [TIMEFRAME]. Based on what you know about both roles: (1) list the 6 most critical skills, experiences, or credentials I am likely missing; (2) for each gap, give a specific and realistic action to close it within my timeframe; (3) identify the one gap that, if left unaddressed, is most likely to block my progression regardless of everything else; (4) identify one thing I probably already have that is being undervalued and should be made more visible. Context about me: [BRIEF BACKGROUND].

Why it works: *The undervalued strength prompt rebalances the analysis — most people focus entirely on what they lack while underselling existing assets that are directly relevant to the target role.*

Best for: Planning a career transition, targeting a promotion, deciding where to invest professional development budget, or applying for a role where you are not sure you are fully qualified.

38

Ask for a Promotion

Career

Help me prepare to ask for a promotion from [CURRENT TITLE] to [TARGET TITLE]. My case — specific achievements at or above the next level: [LIST 3-4 WITH IMPACT WHERE POSSIBLE]. My manager's likely concerns or objections: [WHAT YOU THINK THEY MIGHT SAY]. Timeline: [WHEN YOU ARE HAVING THIS CONVERSATION]. Give me: (1) the talking points for a 10-minute conversation, opening with impact not tenure; (2) a prepared response to each likely objection; (3) the one question to ask at the end that moves toward a decision rather than leaving it open; (4) what to do if the answer is not yet rather than no.

Why it works: *"Not yet" and "no" require completely different responses — preparing for both means you walk out of any outcome knowing your next move rather than improvising it.*

Best for: When you have been operating at the next level and need to make the case formally rather than waiting to be recognised, or when you want to avoid a conversation that becomes a yearly hope rather than a plan.

39

Career Story

Career

Help me articulate my career story for [PURPOSE: job interview / networking event / speaking introduction / LinkedIn video / investor pitch]. My career path: [BRIEF CHRONOLOGICAL SUMMARY]. The thread connecting it that is not obvious from the titles: [YOUR INTERPRETATION — or say "help me find it"]. Audience: [WHO THEY ARE AND WHAT THEY CARE ABOUT]. Constraints: under 90 seconds when spoken, approximately 220 words. Make the story feel intentional and directional — a considered journey rather than a sequence of things that happened to me. Produce two versions: one that leads with the problem I have spent my career solving, one that leads with where I am going.

Why it works: *Two versions with different anchors — past problem vs future direction — reveal which frame resonates more strongly depending on the specific audience and context.*

Best for: Introducing yourself in interviews, networking events, panels, podcasts, or any situation where you have 90 seconds to make someone understand who you are and why that matters.

40

Performance Self-Review

Career

Help me write my performance self-review for [REVIEW PERIOD]. My most significant achievements with impact: [LIST]. Challenges I faced and how I handled them: [LIST]. Areas I am actively developing: [LIST]. Goals I am setting for the next period: [LIST]. Who will read this: [MANAGER / HR / SENIOR LEADERSHIP]. Tone: confident, honest, and growth-oriented. Write it as connected prose — not a bullet list. Under 400 words. End with one sentence that frames where I am heading rather than just summarising where I have been.

Why it works: Prose self-reviews signal self-awareness and articulacy — the format itself communicates the kind of reflective thinking that is associated with the judgment required at senior levels.

Best for: Annual or quarterly performance reviews, promotion packets, or any formal assessment where your written self-evaluation will be read by people who influence your career trajectory.

DOMAIN

05

Business & Entrepreneurship

10 prompts for validating ideas, pitching, understanding customers, making better decisions, and building with less guesswork.

41

Validate My Idea

Business

I have a business idea: [DESCRIBE IT IN 3-4 SENTENCES — what it is, who it is for, and how it makes money]. Play devil's advocate rigorously. Give me: (1) the three most likely reasons this fails in the first 18 months — specific mechanisms, not general concerns like "competitive market"; (2) the single assumption my entire model depends on that I have not yet tested in the real world; (3) a simple, low-cost experiment I could run in the next 2 weeks to test whether that core assumption holds before committing further. Do not validate — challenge.

Why it works: *Specific failure mechanisms at 18 months and a 2-week test constraint force actionable intelligence rather than the theoretical risk assessment that most validation exercises produce.*

Best for: Before committing significant time, money, or relationships to any new business concept, product idea, or venture where the cost of being wrong is high.

42

60-Second Elevator Pitch

Business

Write a 60-second elevator pitch for [BUSINESS / PRODUCT / SERVICE] that works when spoken aloud, not just on paper. Structure it as: (1) the problem in one sentence — specific enough that the right audience will recognise it immediately; (2) the solution in one sentence; (3) why this works when alternatives have failed; (4) one piece of concrete evidence — a number, a customer, a result, or a specific proof point; (5) a clear ask or next step. Target audience: [WHO YOU ARE PITCHING]. No jargon, no buzzwords. After the pitch, write the one line I could use if someone asks "what do you do" at a dinner party.

Why it works: *The dinner party line tests whether the pitch can survive compression into casual conversation — it forces a distillation that reveals whether the core value proposition is genuinely clear.*

Best for: Investor meetings, demo days, networking events, accelerator applications, or any moment where you have under 90 seconds to create enough interest to earn a longer conversation.

43

Customer Interview Questions

Business

Generate 12 customer interview questions for [PRODUCT / SERVICE / IDEA]. The goal is to understand how potential customers currently experience [THE PROBLEM YOU ARE SOLVING] and what they have tried — not to pitch or validate our solution. Include questions that reveal: (1) their current behaviour and workarounds; (2) the emotional cost of the problem, not just the practical impact; (3) how they make decisions in this category; (4) what "good enough" looks like to them so I can understand the real bar I need to clear. After the questions, flag any that could inadvertently lead the interviewee toward a positive response.

Why it works: *Flagging leading questions is the discipline that separates discovery interviews from confirmation exercises — it is what makes the data you collect actually useful.*

Best for: Before building anything new, entering a new market, or testing whether a problem is significant enough and underserved enough to build a business around.

44

Competitive Analysis

Business

Give me a competitive analysis for [MY BUSINESS / PRODUCT] in the [INDUSTRY / CATEGORY]. Cover: (1) the 4-5 most relevant competitors or substitutes customers use today; (2) for each: what they do well, what they do poorly, and — most importantly — what their customers most often complain about; (3) how customers currently decide between these options; (4) the positioning gap — the space in the market that none of them occupy well and that represents a real opportunity; (5) the one trend that could shift this competitive landscape significantly in the next 2-3 years.

Why it works: *The trend that could shift the landscape is the forward-looking output that converts a competitive analysis from a snapshot into a strategic document.*

Best for: Starting a venture, entering an existing market, repositioning a product, or any annual strategic review where you want to understand the competitive environment accurately.

45

One-Page Business Plan

Business

Write a one-page business plan for [BUSINESS IDEA]. Include these seven sections in order, each as brief as possible: THE PROBLEM — what pain exists and for whom, specifically; THE SOLUTION — what is being built and the key mechanism; THE CUSTOMER — the most specific description of who the first 100 customers are; REVENUE MODEL — exactly how money flows from whom to whom; GO-TO-MARKET — how the first 100 customers are reached, in practical terms; THE THREE BIGGEST RISKS — the assumptions most likely to be wrong; THE ONE METRIC — the single number that shows this is working. No padding. No mission statement.

Why it works: *The seven constraints force the essential thinking that most business plans bury under formatting and optimistic prose — it is the document a rational investor or co-founder actually needs.*

Best for: Pitching early investors or co-founders, stress-testing your own thinking before committing resources, or communicating the business clearly to any stakeholder who needs the essential version.

46

Pricing Strategy

Business

Help me think through pricing for [PRODUCT OR SERVICE]. Context: target customer is [DESCRIBE THEM SPECIFICALLY], the best alternative they would compare us to charges [PRICE RANGE], my estimated cost to deliver is [COST — or say "unclear, help me estimate"], and my primary business goal is [MAXIMISE MARGINS / MAXIMISE VOLUME / BUILD MARKET SHARE]. Give me: (1) three distinct pricing approaches with the logic and trade-offs of each; (2) the approach you would recommend given my specific context and why; (3) the one pricing mistake this category of business most commonly makes; (4) what I should test in the first 90 days to know if my pricing is right.

Why it works: *The 90-day test question converts a pricing decision into a pricing hypothesis — it builds in the feedback loop that allows evidence-based adjustment rather than permanent commitment to a guess.*

Best for: Setting prices for the first time, reconsidering a pricing model that is not converting, or preparing to raise prices without losing the customers you most want to keep.

47

Client Proposal

Business

Write a one-page client proposal for [WHAT YOU ARE PROPOSING TO DO] for [CLIENT TYPE — industry, size, and challenge they face]. Structure it as: (1) THEIR SITUATION — what is happening for them that makes this relevant now, written from their perspective; (2) THE APPROACH — what will be done and how, in plain language without jargon; (3) WHAT THEY GET — specific, tangible deliverables with any relevant timelines; (4) INVESTMENT — the fee, payment structure, or cost range; (5) NEXT STEP — the single specific action that moves this forward. Open with their situation, not your credentials.

Why it works: *Opening with their situation rather than your credentials demonstrates you have understood their problem before asking to be trusted to solve it — it inverts the typical proposal structure in a way that resonates.*

Best for: Pitching services, consulting engagements, freelance projects, or any work where a written proposal is part of the process and you want to stand out from proposals that lead with capability rather than understanding.

48

SWOT Analysis

Business

Run a thorough SWOT analysis for [BUSINESS / PRODUCT / DECISION]. Context: [2-3 SENTENCES OF BACKGROUND]. For each quadrant, give 4 specific points — contextually accurate to my situation, not generic. After the four quadrants, add a fifth section: STRATEGIC IMPLICATIONS — given this SWOT, what is the single most important thing to start doing, the single most important thing to stop doing, and the threat that requires a specific response in the next 90 days. Distinguish between threats that are external and largely uncontrollable versus threats that are internal and addressable.

Why it works: *Distinguishing controllable from uncontrollable threats prevents wasted energy on things you cannot change and neglect of the ones you can — the most common failure mode of SWOT analysis.*

Best for: Strategic planning sessions, new product launches, entering a partnership, making a major commitment, or any decision where structured risk assessment should happen before resources are committed.

49

Stress Test Assumptions

Business

Here is my plan or strategy: [PASTE IT IN DETAIL]. List every assumption this plan depends on — including explicit ones I have stated and implicit ones I have baked in without stating them. For each assumption: (1) how likely is it to be true (High / Medium / Low); (2) how bad is the impact if it is wrong (High / Medium / Low); (3) what is one specific way to test or validate it before committing further. Then identify: the assumption that, if wrong, makes the whole plan unworkable; and the assumption I seem most confident about but probably should not be.

Why it works: *The assumption you seem most confident about is the one that carries the highest unexamined risk — surface-level confidence about a critical assumption is exactly where expensive surprises hide.*

Best for: Before major launches, investments, partnerships, or commitments where the cost of being wrong is significant and time exists to validate key assumptions before full commitment.

50

Name Ideas

Business

Generate 20 name ideas for [BUSINESS / PRODUCT / PROJECT / EVENT]. Requirements: [YOUR CRITERIA — e.g. under 10 characters, easy to spell, not a made-up word, works in English and [LANGUAGE], domain likely available, etc.]. For each name: one sentence on what it communicates and whether it meets the requirements. After all 20: shortlist the top 5 with a brief rationale for each, identify which of the 5 is easiest to protect as a trademark, and flag any that could create confusion with existing well-known brands.

Why it works: *Trademark protection and confusion risk are the practical filters that convert a creative exercise into something that will not create legal or brand problems later.*

Best for: Naming a new business, product, feature, event, community, or project where the name will persist and needs to work across multiple contexts and markets.

DOMAIN

06

Marketing & Content

10 prompts for captions, hooks, ad copy, campaigns, newsletters, scripts, and content that achieves something.

51

Instagram Caption

Marketing

Write an Instagram caption for a [TYPE OF POST: product showcase / educational carousel / personal story / behind-the-scenes / announcement / opinion]. The image or video shows: [DESCRIBE IN ONE SENTENCE]. My brand tone: [3 WORDS]. The one message I want the reader to walk away with: [ONE SENTENCE]. The action I want them to take: [LIKE / COMMENT WITH X / SAVE / CLICK LINK / DM ME]. Format: hook in the first line (does not start with "I" or a question), main message in 2-3 sentences, call to action, 6 relevant hashtags. Write two versions: one more informative, one more conversational.

Why it works: Two tonal versions let you match the caption to where the post lands in your feed — informative works well for carousels, conversational for personal or behind-the-scenes content.

Best for: Any Instagram post where you want engagement, saves, or action rather than just a visual accompanied by a few words.

52

Ad Copy — Three Angles

Marketing

Write 3 ad copy variations for [PRODUCT / SERVICE]. Target customer: [DESCRIBE IN DETAIL — their situation, what they want, what they fear, what has not worked before]. Each variation must use a completely different emotional angle: Variation 1 — lead with the PROBLEM and the emotional cost of not solving it; Variation 2 — lead with the OUTCOME and the specific way life changes after solving it; Variation 3 — lead with SOCIAL PROOF or authority — someone like them has already done this. Each variation: under 65 words. Same call to action: [YOUR CTA]. After all 3, tell me which you would test first and why.

Why it works: The recommendation of which to test first converts a creative output into a testing strategy — saving you the work of deciding which to prioritise before you have any data.

Best for: Meta, Google, LinkedIn, or any platform where testing multiple creative angles is the standard approach and you need multiple versions quickly before optimising.

53

Content Pillar Strategy

Marketing

Design a content pillar strategy for [BRAND / PERSON / BUSINESS] in the [NICHE]. Audience: [WHO — describe their situation, what they are trying to achieve, what they struggle with]. Goal: [WHAT CONTENT SHOULD DO — build trust / generate leads / grow community / establish expertise]. Give me: (1) 5 content pillars with a one-line description of each and the specific insight or value each delivers; (2) 3 specific post ideas per pillar labelled with the platform each works best on and the format; (3) one content rule that distinguishes this brand's content from everyone else in the niche; (4) the one pillar I should post most frequently and why.

Why it works: *The frequency recommendation forces a strategic prioritisation that most content strategies skip, leading to even distribution across pillars when concentration would be more effective.*

Best for: Starting a content strategy from scratch, giving structure to an inconsistent posting habit, or briefing a team or agency on how to create content for your brand.

54

Email Subject Lines

Marketing

Write 12 email subject lines for an email about [TOPIC]. Audience: [DESCRIBE THEM]. Email context: [IS THIS A NEWSLETTER / SALE / COLD OUTREACH / PRODUCT UPDATE / FOLLOW-UP]. Mix approaches and label each one: Curiosity, Urgency, Specific Benefit, Personalisation, Humour, Counterintuitive, or Social Proof — 2 of each approach minus the last (use 1 Social Proof). Rules: no clickbait, no all-caps, nothing that triggers a spam filter, maximum 8 words. After all 12: (1) the 3 you would A/B test first and why; (2) the one to avoid and what makes it weaker.

Why it works: *Identifying the one to avoid and explaining what makes it weaker is as useful as identifying the best — it teaches you the pattern to avoid, not just the instance.*

Best for: Any email campaign, newsletter issue, cold outreach sequence, or transactional communication where open rate is the first conversion you need to win.

55

Campaign Concept

Marketing

Develop a full marketing campaign concept for [PRODUCT / EVENT / GOAL]. Include: (1) THE BIG IDEA — one sentence capturing the campaign concept; (2) THE INSIGHT — the human truth or tension the campaign is built on; (3) TARGET AUDIENCE — specifically who, and what belief or behaviour this campaign needs to shift; (4) THREE EXECUTIONS — how the idea comes to life in three different channels or formats; (5) MEASUREMENT — the one metric that determines if this campaign succeeded; (6) WHAT FAILURE LOOKS LIKE — the specific signal that tells us to stop or change course; (7) THE RISK — the one thing about this campaign that could backfire and how to mitigate it.

Why it works: *The backfire risk and mitigation is the output most campaign briefs omit — surfacing it before launch is far less expensive than discovering it during.*

Best for: Product launches, seasonal campaigns, brand awareness efforts, or any initiative requiring a coordinated, multi-channel marketing push with a clear success condition.

56

Hook Generator

Marketing

Write 10 scroll-stopping opening lines for content about [TOPIC]. Audience: [DESCRIBE THEM SPECIFICALLY]. Rules: each hook must be under 15 words, none can start with "Have you ever" or "Are you struggling with", and each must create genuine curiosity or provoke a strong reaction in the specific reader you described. Label each by type: Bold Claim, Counter-intuitive Fact, Specific Number, Relatable Problem, Direct Challenge, Curiosity Gap, Strong Opinion, Prediction, Confession, or Contradiction. After all 10: pick the 3 strongest for this specific audience and explain why.

Why it works: The type labels create a vocabulary for discussing and iterating on hooks — knowing what type something is lets you adjust the approach systematically rather than just rewriting until it feels better.

Best for: LinkedIn posts, Instagram carousel first slides, YouTube thumbnail copy, email subject lines, or any content where the opening line is the primary determinant of whether anything else gets seen.

57

Brand Voice Document

Marketing

Write a brand voice document for [BRAND NAME] in [INDUSTRY] that will be used to brief writers, team members, and AI tools. Include: (1) HOW WE SOUND — 3 adjectives, each with a one-sentence explanation and one example phrase; (2) HOW WE DO NOT SOUND — 3 adjectives we must never be, each with an example of what to avoid; (3) OUR VOCABULARY — 6 words or phrases we use consistently and 6 we never use; (4) TONE SHIFTS BY CONTEXT — how voice adapts across social media, email, advertising, and customer service; (5) THE BRAND VOICE TEST — one question that anyone can ask to check whether a piece of writing sounds like us.

Why it works: The brand voice test is the most practically useful element — a single question is far more usable than a full style guide when someone is in the middle of writing under time pressure.

Best for: Any brand that has multiple people creating content, is briefing an agency or freelancer, or wants consistent output from AI tools used across the team.

58

Video Script Outline

Marketing

Write a detailed script outline for a [LENGTH]-minute video for [PLATFORM: YouTube / Instagram / LinkedIn / Webinar] about [TOPIC]. Include: (1) THE HOOK — the first 20-30 seconds, scripted in full; (2) SETUP — what the viewer will gain by watching to the end; (3) MAIN SECTIONS — each with key points, transitions between them, and the central insight of each section; (4) THE STORY OR EXAMPLE — the specific real example to use and where it fits; (5) THE CLOSE — scripted in full; (6) THE CTA — what to ask the viewer to do and in what words; (7) B-ROLL NOTES — where visual content would strengthen each section.

Why it works: B-roll notes force you to think in terms of a watchable video rather than a spoken essay — the most common failure of on-camera content created by people who are comfortable writing but not filming.

Best for: YouTube, Instagram, LinkedIn, or educational videos where you want a detailed plan before recording so the script and visuals are considered together rather than separately.

59

Repurpose One Piece of Content

Marketing

I have this content: [PASTE OR DESCRIBE IT — format, length, main ideas, and where it was originally published]. Repurpose it into all of the following, keeping the core insight identical: (1) A LinkedIn post — first-person, 180-220 words; (2) An Instagram carousel — a 7-slide outline with the text for each slide and a suggested visual for each; (3) A Twitter/X thread — opener, 5 supporting tweets, and a closer; (4) An email to my list — subject line, 3 paragraphs under 200 words total; (5) A spoken 60-second version for a voice note, podcast clip, or story. For each format, note one change you made for the platform that the original did not require.

Why it works: The note on what changed for each platform is the output that teaches you how content works differently across channels — more useful than just the repurposed versions themselves.

Best for: Any time you have a piece of content with a strong core idea that deserves more distribution than a single platform can give it — which is almost every piece of genuinely useful content.

60

Customer Testimonial Rewrite

Marketing

Rewrite the following customer testimonial to make it significantly more compelling for marketing use. Rules: every fact and sentiment must remain true — do not exaggerate, invent, or imply anything not in the original; make the specific problem and the specific outcome as vivid and concrete as possible; remove any vague or generic phrases that could apply to any positive experience; write it in first person; under 90 words. After the rewrite: (1) a 10-word pull quote for use in ads or headers; (2) a note on which element of the original is the most powerful and why it should not be changed. Original: [PASTE TESTIMONIAL]

Why it works: The note on the most powerful element prevents over-editing — knowing what not to change is as important as knowing what to improve.

Best for: Website social proof, advertising creative, sales presentations, case study snippets, or any context where real customer words need to do maximum persuasive work.

DOMAIN

07

Finance & Money

10 prompts for budgeting, planning, understanding financial products, managing debt, and making better money decisions.

61

Build a Personal Budget

Finance

Help me build a monthly budget I will actually stick to. Monthly take-home income after tax: [AMOUNT]. Fixed expenses (same every month — list each with amount): [LIST]. Variable expenses (rough monthly average — list each): [LIST]. Financial goal for the next 6 months: [SPECIFIC GOAL]. Current savings: [AMOUNT]. Give me: (1) an analysis of where I am likely overspending relative to my goal; (2) the one change that would have the biggest impact on reaching my goal; (3) a realistic monthly budget template with categories and amounts; (4) the one thing I should automate to make this budget work without relying on willpower.

Why it works: Automation is the output that makes a budget sustainable rather than a document you revisit once and abandon — it is where behavioural finance and financial planning intersect.

Best for: Building a budget for the first time, resetting one that has stopped working, or getting serious about a specific financial goal within a defined timeframe.

62

Explain a Financial Concept

Finance

Explain [FINANCIAL TERM, CONCEPT, OR PRODUCT] in plain English. I have [NO FINANCIAL BACKGROUND / SOME FAMILIARITY — describe it]. Use a concrete everyday analogy that explains the actual mechanism, not just a surface comparison. Cover: (1) what this is and how it works; (2) when it matters in real life and when it does not; (3) the most common mistake people make regarding this; (4) one question I should ask any bank, advisor, or institution who presents this to me before agreeing to anything; (5) what I should never do with or assume about this concept.

Why it works: The "what never to do" prompt is the protective output — it arms you with the most practically useful knowledge, which is what to avoid rather than what to optimise.

Best for: Understanding financial news, products, investment options, insurance terms, or any money concept you are about to make a decision about and do not fully understand.

63

Savings Goal Plan

Finance

I want to save [AMOUNT] for [SPECIFIC GOAL — be precise] within [TIMEFRAME]. Current monthly savings capacity: [AMOUNT]. Current savings toward this goal: [AMOUNT]. Income stability: [STABLE / VARIABLE / FREELANCE]. Give me: (1) whether my target is achievable within the timeframe; (2) if not, the adjusted monthly savings amount needed and the gap to address; (3) whether there is a smarter structure for this goal — account type, phased approach, or alternative vehicle; (4) the two biggest risks to this plan and how to design around each; (5) what to do with this money if I reach the goal early.

Why it works: The "if I reach it early" question is the planning detail that prevents the common failure where achieving a goal leaves you without a next step and the money gets absorbed into spending.

Best for: Planning for a house deposit, emergency fund, education costs, travel, large purchase, or any medium-term financial goal with a specific target and timeline.

64

Compare Financial Products

Finance

Compare [PRODUCT A — describe the key terms, rates, and conditions] vs [PRODUCT B — describe the key terms, rates, and conditions] for someone in my situation: [BRIEF DESCRIPTION — income, goals, risk tolerance, timeline]. Give me: (1) a comparison table covering the 6-8 variables most relevant to my situation; (2) total cost or effective return over [MY SPECIFIC TIMEFRAME] for each option in real numbers, not just percentages; (3) the hidden fees, conditions, or risks that are easy to overlook; (4) which product you would recommend given my situation and the single most important reason why; (5) what change in my situation would flip the recommendation.

Why it works: The "what would flip the recommendation" question is the dynamic output — it tells you when to revisit this decision as your situation changes rather than treating the choice as permanent.

Best for: Choosing between savings accounts, investment products, insurance plans, credit cards, loan types, or any financial product where the comparison is not obvious from the headline numbers.

65

Debt Repayment Plan

Finance

Help me create a debt repayment plan. My debts — list each with name, total balance, interest rate, and minimum monthly payment: [LIST]. Total monthly budget available for repayment beyond minimums: [AMOUNT]. My priority: [FASTEST DEBT-FREE DATE / LOWEST INTEREST PAID / REDUCING MONTHLY OBLIGATIONS]. Give me: (1) the repayment method that fits my priority and why; (2) the exact order to pay off each debt; (3) a projection of when each debt is cleared and the month I become debt-free; (4) total interest paid under this plan vs doing minimums only; (5) the one behaviour change that would accelerate this plan most if I can find an extra [SMALL AMOUNT] per month.

Why it works: The behaviour change for an extra small amount makes the plan dynamic rather than static — it shows how small additional effort compounds significantly over the repayment timeline.

Best for: Anyone with multiple debts who needs a structured, mathematically sound payoff plan rather than guessing at which to prioritise each month.

66

Understand My Payslip

Finance

Help me fully understand my payslip. I am employed in [COUNTRY / REGION]. The items I do not understand or want to verify: [LIST THEM WITH AMOUNTS]. For each item: (1) what it is and why it appears; (2) who receives this money; (3) whether I have any right to opt out, adjust, or reclaim any part of it; (4) whether the amount appears correct for my gross salary. After reviewing all items, flag anything that looks unusual, anything that might indicate an error, and two questions I should ask HR or payroll.

Why it works: *The two questions to ask HR convert the explanation into a next step — it closes the loop between understanding and action.*

Best for: Anyone receiving a payslip in a new job, a new country, after a pay change, or for the first time who wants to understand exactly where their money goes.

67

Freelancer Finance Setup

Finance

I am self-employed and earn approximately [INCOME] per [MONTH / YEAR] in [COUNTRY / REGION]. My work is [DESCRIBE WHAT YOU DO]. Cover: (1) how much I should set aside for taxes each month and the calculation method; (2) the most commonly missed deductible expenses for my type of work; (3) how to structure my income between a business account and personal account if applicable; (4) the three financial habits that matter most in the first two years of self-employment; (5) the one financial mistake that most new freelancers make that takes years to recover from.

Why it works: *The most common mistake with long recovery time is the output that saves the most money and stress — it is the concentrated experience of everyone who came before you in self-employment.*

Best for: Anyone recently gone self-employed, starting to freelance alongside employment, or earning income outside of payroll who has not yet set up a proper financial system.

68

Investment Basics

Finance

Explain investment fundamentals for someone starting with [AMOUNT] and a [TIME HORIZON: 3-year / 5-year / 10-year+] horizon. I am [RISK TOLERANCE: cautious — I do not want to lose any of it / moderate / willing to take risk for higher returns] and I am based in [COUNTRY]. Cover: (1) the main investment options available to me in order of risk; (2) what a sensible first allocation might look like for my profile; (3) the three traps that catch most first-time investors; (4) the one concept I must understand before putting any money anywhere; (5) how to evaluate whether something I am being offered is legitimate versus a product designed to benefit the seller at my expense.

Why it works: *The seller-benefit test is the protective output — it gives you a practical heuristic for distinguishing products designed for your benefit from ones designed to extract from you.*

Best for: Anyone starting to invest for the first time, returning after a long gap, or trying to understand where to place money beyond a savings account without being misled.

69

Emergency Fund Plan

Finance

Help me build an emergency fund. My monthly essential expenses: [TOTAL — including rent, food, utilities, transport, and minimum debt payments]. Current savings: [AMOUNT]. Income stability: [STABLE SALARY / VARIABLE / FREELANCE / BETWEEN JOBS]. Give me: (1) the right emergency fund target for my specific situation, explaining why it differs from the standard 3-month advice; (2) a realistic timeline to build it; (3) the best type of account to hold it and why; (4) a definition of what counts as a legitimate emergency versus what does not; (5) exactly what to do the day after I use it.

Why it works: *The specific recovery plan for the day after using the fund is the detail most people never plan and then find disorienting — it prevents the paralysis that follows a financial shock.*

Best for: Anyone without an adequate emergency fund, anyone rebuilding after a financial shock, or anyone who has found their safety net insufficient when they actually needed it.

70

Quarterly Financial Review

Finance

Walk me through a structured quarterly financial review. Ask me 9 questions — covering actual vs budgeted spending, savings progress toward each active goal, debt status, income changes, upcoming large expenses, insurance gaps, financial goals set last quarter, one financial decision I am happy with, and one I regret. Ask one question at a time and wait for my full answer. After all 9, give me: (1) where my finances are genuinely strong; (2) the one area most needing attention; (3) the one specific action in the next 7 days that would have the highest impact on my financial health.

Why it works: *The 7-day action at the end is the conversion from review to change — without a time-bound specific action, even an honest review produces no improvement.*

Best for: Quarterly or annual financial health checks, post-bonus planning, end-of-year reviews, or any deliberate financial assessment where you want to move from diagnosis to action.

08

Health & Wellbeing

10 prompts for nutrition, fitness, sleep, habits, stress, energy, and building a lifestyle that actually sustains you.

71

Weekly Meal Plan

Health

Create a practical 5-day meal plan for me. Dietary requirements and restrictions: [LIST — allergies, dislikes, dietary philosophy]. Cooking skill level: [BEGINNER who wants quick and simple / INTERMEDIATE / ADVANCED]. Time available to cook on weekdays: [MAX MINUTES]. Daily budget: [AMOUNT]. Any other constraints: [EQUIPMENT, STORAGE, CLIMATE, ETC.]. For each day, give breakfast, lunch, dinner, and one snack. After the plan: (1) flag any ingredient appearing in multiple recipes so I can buy in bulk; (2) give a 15-minute meal I can swap in on any day I run out of time; (3) name the highest-nutrition meal on the plan and why.

Why it works: *The 15-minute fallback is the resilience mechanism — it prevents the meal plan from collapsing the first time real life intervenes, which is how most meal plans fail.*

Best for: Eating more intentionally, reducing daily decision fatigue around food, managing a dietary goal, or simply trying to eat better without it becoming a full-time project.

72

Home Workout Plan

Health

Design a [NUMBER]-day per week workout plan. My current fitness state: [DESCRIBE ACCURATELY — sedentary for months / moderately active / regularly training]. Primary goal: [LOSE BODY FAT / BUILD STRENGTH / IMPROVE CARDIOVASCULAR FITNESS / INCREASE FLEXIBILITY / GENERAL HEALTH]. Equipment available: [LIST OR "bodyweight only"]. Time per session: [MINUTES]. Any physical limitations or injuries I need to work around: [LIST OR "none"]. For each workout session, include: warm-up, main session with sets and reps, cool-down, and one form note for the most technically demanding exercise.

Why it works: *Form notes on the most technically demanding movements address the most common cause of home workout failure — injury from poor technique, which is both demoralising and takes weeks to recover from.*

Best for: Starting a home fitness routine, returning to exercise after a gap, or changing a current routine that has plateaued, stopped feeling effective, or become unsustainable.

73

Build a Lasting Habit

Health

I want to build the habit of [HABIT — describe specifically]. I have tried and failed [NUMBER] times. The honest reason I usually quit: [BE SPECIFIC AND HONEST]. My daily routine at the time I want to do this: [WHAT YOU ARE ALREADY DOING AT THAT MOMENT]. Design a 6-week progressive habit plan starting from the smallest possible version. Include: (1) exactly what week 1 looks like in practical terms; (2) the trigger I will attach it to; (3) how to know when to progress to the next level; (4) what to do on the day I miss — specifically; (5) the one support structure that would make the difference between this attempt and the previous ones.

Why it works: The support structure question is what distinguishes a new attempt with different inputs from a repeated attempt with the same ones — it names the environmental or social change required.

Best for: Building any habit requiring consistency — exercise, sleep routines, reading, meditation, nutrition, or anything you have tried and failed to sustain despite genuine motivation.

74

Sleep Improvement Plan

Health

Help me improve my sleep quality and consistency. Current situation: [HOW LONG TO FALL ASLEEP, HOW OFTEN YOU WAKE, WAKE AND SLEEP TIMES, HOW RESTED YOU FEEL]. Known sleep disruptors: [LIST]. What I have already tried: [LIST]. Fixed constraints I cannot change: [E.G. EARLY START, YOUNG CHILDREN, SHIFT WORK]. Design a 4-week progressive plan — week 1 changes only 2 things, adding more each week. For each week: the specific changes and the mechanism by which each one improves sleep. After the plan: the one sleep habit most worth protecting if I can only keep one.

Why it works: The single habit worth keeping if you can only keep one is the prioritisation that makes the plan resilient — it builds a hierarchy that holds when life is difficult.

Best for: Anyone struggling with sleep quality, difficulty falling asleep, waking in the night, or feeling unrefreshed despite what should be adequate sleep duration.

75

Mental Energy Audit

Health

I want to understand what is genuinely draining my mental energy. Ask me 8 questions — covering how I spend my day, my working environment, my relationships, my commitments, my physical health, my thinking patterns, what I have been avoiding, and what I am carrying that I have not addressed. Ask one question at a time and follow up if an answer seems important or incomplete. After all 8: (1) the 3 biggest energy drains you can identify; (2) the one most within my control to address this week; (3) the one that is being caused or amplified by something I am doing rather than something external.

Why it works: The energy drain that is self-caused is the hardest to see and the most useful to name — external drains feel victimising, internal ones are where agency lives.

Best for: Feeling chronically tired or unmotivated without a clear single cause, or preparing to make changes and wanting to know where to start for the highest return.

76

Stress Management

Health

I am dealing with [TYPE AND DESCRIPTION OF STRESS — what is causing it, how long it has been going on, and how it is showing up]. Symptoms I am experiencing: [LIST — physical, emotional, and behavioural]. What I have already tried: [LIST]. What I cannot change about the situation right now: [FIXED CONSTRAINTS]. Give me: (1) 3 techniques suited specifically to this type and intensity of stress — not generic wellbeing advice; (2) one technique usable in under 5 minutes when stress peaks acutely; (3) one structural change to my weekly routine that reduces stress accumulation; (4) the specific warning signs that would indicate I should seek professional support rather than managing this myself.

Why it works: *The professional support warning signs are the output that bridges self-help and actual help — naming them means people act on them rather than rationalising past them.*

Best for: Acute stress periods, work pressure affecting daily function, burnout risk, or anyone managing sustained stress and wanting to do so in a way that does not deplete them further.

77

Eating Well on a Budget

Health

Help me eat more nutritiously on [BUDGET] per week. I live in [CITY / COUNTRY] and typically shop at [TYPE OF STORE]. Cooking skill level: [BEGINNER / INTERMEDIATE]. Dietary requirements: [LIST]. My single biggest eating challenge: [HONEST ANSWER — skipping meals, takeaways, boredom snacking, time, etc.]. Give me: (1) 5 principles for eating well on this budget in this context; (2) the 5 most nutritious foods I can reliably buy for under [SMALL AMOUNT] each; (3) a sample 5-day shopping list with approximate costs; (4) one meal I can make in under 15 minutes with things I probably already have.

Why it works: *The under-15-minute meal from existing ingredients is the practical bridge between the plan and the moment when the plan feels too hard — it prevents the takeaway default.*

Best for: Students, people on tight budgets, anyone who believes eating well requires significant money or time, or anyone whose diet is poor due to practical constraints rather than lack of motivation.

78

Daily Routine Design

Health

Help me design a more intentional daily routine. Wake time: [TIME]. First fixed commitment: [TIME AND WHAT IT IS]. Goals for the morning: [1-2 THINGS]. Goals for the evening: [1-2 THINGS]. Non-negotiable commitments that cannot move: [LIST]. What I want more of: [LIST]. What I want less of: [LIST]. Biggest current problem with my routine: [BE SPECIFIC]. Design a realistic weekday routine with approximate times. After the routine: (1) the one element of my current routine I should protect rather than change; (2) the one element most worth sacrificing to create space for what matters.

Why it works: *Identifying what to sacrifice makes the design realistic rather than additive — most routines fail because they add things without removing anything, which is unsustainable.*

Best for: Anyone who wants more intention and less reaction in daily life, or whose current routine was designed by default rather than by deliberate choice.

79

Recovery and Rest Plan

Health

I am [DESCRIBE CURRENT ACTIVITY LEVEL AND TYPE] and experiencing [SYMPTOMS OR GOALS: poor recovery / persistent fatigue / specific soreness / wanting to improve performance with the same training volume]. Current recovery habits: [WHAT YOU ALREADY DO]. Constraints: [TIME, BUDGET, ACCESS TO FACILITIES]. Give me: (1) a daily recovery routine under 20 minutes; (2) the 3 recovery practices most relevant to my specific situation — not a generic list; (3) what I am likely doing that is actively preventing recovery; (4) when these symptoms warrant seeing a professional rather than managing independently.

Why it works: *What you are doing that prevents recovery is the output most people need most — it is the behaviour causing the problem, which is more useful to identify than additional things to add.*

Best for: Anyone training consistently with inadequate recovery, experiencing persistent soreness or fatigue, or wanting to improve output without simply adding more training volume.

80

Wellbeing Check-In

Health

I want to do a thorough wellbeing check-in. Ask me 10 questions covering: physical health, sleep quality, energy levels, mental clarity, emotional wellbeing, work satisfaction, relationship quality, sense of meaning or purpose, what I have been neglecting, and what I am most proud of right now. Ask one question at a time, and follow up if an answer seems to contain something important that was not fully expressed. After all 10: (1) what seems to be going genuinely well; (2) what seems to need attention and why; (3) the single smallest action this week that would have the most positive compound effect on my overall wellbeing.

Why it works: *The compound-effect framing for the action prioritises impact over completeness — it asks which small thing creates the most downstream benefit, which is different from the most obvious or dramatic change.*

Best for: Monthly wellbeing reviews, recovering from a difficult period, starting a new chapter, or taking stock during a time when life has been moving too fast to notice how you are actually doing.

DOMAIN

09

Personal Life & Relationships

10 prompts for decisions, conversations, travel, goals, growth, and navigating life with more clarity and intention.

81 Have a Difficult Conversation

Personal

I need to have a difficult conversation with [RELATIONSHIP — partner / friend / family member / colleague / manager] about [TOPIC — what happened and why the conversation is needed]. What I want to achieve: [SPECIFIC OUTCOME]. What I am afraid might happen: [YOUR SPECIFIC CONCERN]. What I have already said or tried: [IF ANYTHING]. Give me: (1) how to open the conversation in the first 2 minutes, with the exact words I should consider using; (2) how to handle if they become defensive or shut down; (3) what to do if the conversation goes nowhere; (4) what I should not say even if I feel provoked — specifically, not generally; (5) how to close the conversation regardless of how it goes.

Why it works: The specific closing move is the output most preparation guides skip — knowing how to close gracefully regardless of outcome prevents the conversation from ending without resolution or a clear next step.

Best for: Any confrontation, boundary-setting, feedback exchange, or important conversation you have been avoiding because you are unsure how to start or worried about where it might go.

82 Help Me Decide

Personal

I am trying to decide [DESCRIBE THE DECISION AND OPTIONS]. I have been going back and forth for [HOW LONG]. What I know: [FACTS AND CONSIDERATIONS]. What I am uncertain about: [THE UNKNOWN]. My gut says: [YOUR INSTINCT]. Before giving me a recommendation, ask me 3 questions that you think will reveal something important about this decision that I have not yet named. After my answers, give me your honest view on what I should do and why. Do not hedge, do not say "it depends" without naming what it depends on.

Why it works: The "what it depends on" demand for specificity prevents the non-committal answer that leaves you exactly where you started — the advisor who cannot name what the decision hinges on is not actually helping.

Best for: Any significant personal decision you cannot resolve alone — a major change, a relationship decision, a financial commitment, or anything where you have been circling for too long without clarity.

83 Travel Itinerary

Personal

Plan a [NUMBER]-day trip to [DESTINATION] for [GROUP: solo / couple / family — include ages if children / group of friends]. Interests: [LIST: food / history / nature / art / architecture / adventure / nightlife / slow travel]. Budget level: [BUDGET / MID-RANGE / COMFORTABLE]. Pace: [RELAXED — 2-3 activities per day / MODERATE / PACKED]. Fixed constraints: [MOBILITY, DIETARY, SEASON, SPECIFIC MUST-DO]. Give me a day-by-day itinerary. For each day: morning, afternoon, and evening activities with timing; one meal recommendation with a note on what to order; and one practical tip specific to that day that a guidebook would not tell you.

Why it works: The practical tip that a guidebook would not tell you is where the real value lies — local knowledge, logistical insight, and timing details that make each day actually work rather than just look good on paper.

Best for: Any trip where you want a curated, considered plan rather than the same ten tourist sites every travel website lists in the same order.

84

Set Meaningful Goals

Personal

Help me set better goals for [TIMEFRAME]. Area of focus: [ONE AREA — career / health / relationships / finances / creative work / personal growth]. What I want to be genuinely different by the end of this period: [DESCRIBE THE CHANGE]. What I have tried before: [BRIEF HISTORY]. What has consistently got in the way: [THE REAL OBSTACLES]. Turn this into: (1) one specific, measurable, and achievable goal; (2) 3 milestones that show progress without waiting until the end; (3) the leading indicator I should track weekly to know if I am on track before I miss the goal; (4) the most likely reason this attempt fails and how to design against it now.

Why it works: *Designing against the most likely failure mode before starting is the one intervention that distinguishes this attempt from all the previous ones that failed for the same reason.*

Best for: New year, new quarter, after a setback, or any moment where you want to move forward with genuine intention rather than hoping things improve through vague aspiration.

85

Write a Real Apology

Personal

Help me write a genuine apology to [PERSON — describe your relationship] for [WHAT HAPPENED — describe your role honestly, not the version that makes you look better]. The apology must: acknowledge specifically what I did and the impact it had on them; take full responsibility without minimising, deflecting, or adding a "but"; demonstrate I understand how it affected them from their perspective, not just the fact that it was wrong; state something specific I will do differently; ask nothing of them in return — no forgiveness request, no reassurance, no reciprocation. Format: [SHORT MESSAGE / LONGER LETTER].

Why it works: *Asking nothing in return is the discipline that converts an apology from a transaction about the apologisee's relief into an acknowledgement of the other person's experience.*

Best for: Any situation where you have genuinely caused harm to someone who matters and a real apology — not a social nicety — is both warranted and overdue.

86

Deal With a Difficult Person

Personal

I am dealing with a difficult person in my life — [DESCRIBE THEM BY ROLE AND THE SPECIFIC BEHAVIOUR, NOT THEIR NAME]. How long this has been going on: [TIMEFRAME]. What I have tried: [LIST]. What I cannot change about the situation: [FIXED CONSTRAINTS — e.g. I cannot leave this job, I cannot cut off this relationship]. Give me: (1) 3 strategies for managing this dynamic that do not require them to change; (2) the one thing I might be doing that is making it worse or giving them more of what they need to continue; (3) a way to assess whether this is worth managing versus requiring a more significant change; (4) what I should stop doing immediately.

Why it works: *The immediate stop is the most actionable output — it is the existing behaviour with the highest cost that can be changed without requiring the other person to do anything different.*

Best for: Toxic workplace dynamics, difficult family relationships, or any recurring difficult interaction you cannot simply exit and need practical, sustainable strategies to navigate.

87

Journal Prompts

Personal

Give me 8 journal prompts for someone wanting to reflect on [THEME: a significant experience / a relationship / a career transition / a period of growth / personal values / what I want next]. The prompts should progress from observation (what happened) through understanding (why it happened and what it means) to insight (what changes or emerges from this). Each should be open enough to generate 15-20 minutes of honest writing. Avoid prompts that can be answered with a single sentence or that lead toward a predetermined positive conclusion.

Why it works: *Avoiding predetermined positive conclusions means the prompts allow for honest reflection rather than journaling as self-improvement performance — which is where the real insight comes from.*

Best for: Starting or deepening a journaling practice, processing a significant event or transition, or doing the kind of thinking most people mean to do but never carve out space for.

88

Design Your Ideal Week

Personal

Help me design a week that reflects what I actually value, not what I think I should value. Step 1: ask me my top 3 priorities in life right now and wait for my answer. Step 2: ask what my current week actually looks like and wait. Step 3: ask what I want more of and less of and wait. Then design a weekly structure based on my answers. After the structure: (1) identify the single biggest conflict between my stated priorities and my actual current schedule; (2) name the one thing that needs to move to resolve that conflict; (3) what I should say no to this week specifically.

Why it works: *The interactive structure ensures the design is based on what you actually said rather than assumptions — the gap between stated priorities and actual schedule is where the insight lives.*

Best for: Anyone who feels their time does not reflect their values, is going through a transition, or has been telling themselves they will make changes without identifying specifically what needs to move.

89

Process a Difficult Experience

Personal

I have been through [DESCRIBE WHAT HAPPENED — as much or as little as you are comfortable sharing]. I am not looking for solutions or advice right now. I want to understand it better and find language for what I am carrying. Ask me 6 questions that help me think more clearly about this — what happened, how I made sense of it, what I am still holding, who I became through it, what I lost, and what (if anything) I want to do with it. Ask one question at a time. After my answers, reflect back what you hear without interpreting, diagnosing, or advising.

Why it works: *Reflecting without interpreting gives you back your own thinking more clearly — which is often what processing requires, not a new perspective but greater clarity on your own.*

Best for: Making sense of loss, disappointment, a relationship ending, a difficult period, or any experience that left something unresolved that you have not been able to fully articulate or move past.

90

Declutter and Minimise

Personal

Help me declutter [AREA: my home / wardrobe / digital life / schedule / commitments]. My honest reason for keeping things: [YOUR SPECIFIC PATTERN — sentimentality / might need it / spent money on it / identity / guilt]. Area I most want to tackle first and why: [SPECIFIC]. Time available this week: [REALISTIC HOURS]. Give me: (1) a decision framework I can apply in under 30 seconds per item; (2) a practical starting sequence for this week — exactly where to begin; (3) what to do with things I decide to remove but cannot easily let go of; (4) the one question that cuts through my personal rationalisation pattern when I am tempted to keep something I should release.

Why it works: *A question targeted at your specific rationalisation pattern is more useful than any generic framework — it is the override for the specific argument you make to yourself, not the general one.*

Best for: Anyone overwhelmed by physical or digital clutter, anyone who starts decluttering and loses momentum, or anyone whose environment has started to affect how they think and feel.

DOMAIN

10

Creative & Fun

10 prompts for stories, poems, games, gifts, creative challenges, and anything that puts imagination to work.

91 Short Story Opening

Creative

Write the opening 450 words of a short story with these specific ingredients: GENRE: [e.g. psychological thriller / literary fiction / dark comedy / magical realism]. SETTING: [TIME AND PLACE — be specific]. A CHARACTER WHO: [DESCRIBE ONE DISTINCTIVE QUALITY OR SITUATION]. A TENSION: [WHAT IS WRONG OR ABOUT TO BECOME WRONG]. The opening must: establish the character's voice in the first paragraph; create a sense of unease, anticipation, or fascination by the third; and end on a line that makes it impossible not to want to read the next sentence. No scene-setting before character, no exposition before action. Show, do not summarise.

Why it works: "No scene-setting before character" is the structural rule that prevents the opening from becoming the geography and weather description that makes most fiction beginnings forgettable.

Best for: Starting a short story, generating creative writing prompts for a class, breaking a creative block, or simply seeing what a story could become when given specific, unusual ingredients.

92 Poem in a Specific Style

Creative

Write a poem about [SUBJECT — an emotion, a person, a place, a moment, an idea] in the style of [POET OR STYLE — e.g. Pablo Neruda / Mary Oliver / spoken word / classical sonnet / haiku sequence / prose poem]. Specific constraints: [YOUR REQUIREMENTS — e.g. must contain the line "X", must not rhyme, must use only concrete images with no abstract statements, must be under 18 lines]. Emotional register: [GRIEF / WONDER / WRY HUMOUR / TENDERNESS / RAGE / LONGING / QUIET JOY]. After the poem, write one sentence on the central image or decision that holds it together.

Why it works: The one sentence on the central decision externalises the craft behind the poem — it turns a creative output into a brief lesson in how this kind of writing works.

Best for: Writing something for a specific person or occasion, exploring a poetic style you admire, producing creative writing with genuine craft, or giving a gift that cannot be bought.

93 Gift Ideas That Land

Creative

Generate thoughtful gift ideas for [PERSON — describe them: their age, specific interests, personality, what they already have plenty of, what they complain about, what they secretly wish they had more of] for [OCCASION]. Budget: [RANGE]. Rules: no generic gift lists, no vouchers unless this person specifically prefers flexibility, nothing that requires significant effort from them to enjoy. For each idea: (1) one sentence on why this specific person would love it — not why it is a good gift generally; (2) where to get it; (3) rate it for effort-to-give on a scale of 1-5.

Why it works: The effort-to-give rating is a practical filter that the giver actually needs but never sees on gift lists — some great ideas are not realistic within the time available.

Best for: Any gift occasion where you want to give something that feels considered rather than convenient — especially for someone who is difficult to buy for or who says they do not need anything.

94

Trivia Quiz

Creative

Create a [NUMBER]-question trivia quiz on [TOPIC — or mixed topics across categories]. Difficulty: [EASY / MIXED: roughly equal easy, medium, and hard / HARD]. Format: each question as multiple choice with 4 options labelled A, B, C, D.

Requirements: at least 3 questions should exploit a common misconception — questions where most people would answer confidently but incorrectly; at least 2 should be questions people will debate even after seeing the answer. After all questions: an answer key with a one-sentence explanation for each answer.

Why it works: Questions that exploit misconceptions and provoke debate are what make a quiz genuinely memorable rather than just a test of who has memorised the most facts.

Best for: Quiz nights, family gatherings, team events, educational assessments, corporate training, or simply testing your own knowledge on a topic you think you know well.

95

Character Creation

Creative

Help me create a compelling fictional character for [MEDIUM: novel / short story / screenplay / game / roleplay]. The character is: [AGE, BACKGROUND, ROLE IN THE STORY]. What they want on the surface: [STATED DESIRE]. What they actually want at a deeper level: [UNDERLYING NEED]. Their greatest fear: [THE SPECIFIC FEAR]. Their most useful strength: [ONE TRAIT]. The flaw that creates the central problem: [ONE SPECIFIC WEAKNESS]. Give me: (1) their backstory in 100 words; (2) their voice — 3 lines of dialogue only this character would say; (3) their central contradiction — the thing about them that does not fully add up, which is what makes them interesting to spend time with; (4) what they need to learn by the end of the story.

Why it works: The central contradiction is the most important element in character design — flatness comes from consistency; fascination comes from tensions that do not fully resolve.

Best for: Developing a protagonist or major character for any fictional work, building an NPC for a game, creating a persona for any creative or commercial purpose, or simply exploring what a character could be.

96

My Life as a Movie

Creative

Write the opening 5 minutes of a movie based on a chapter of my life: [DESCRIBE THE PERIOD OR EVENT]. Tell me what you need to write it accurately before starting. After I answer, write it as a proper screenplay — FADE IN, scene description, dialogue. Tone: [DRAMA / DARK COMEDY / COMING-OF-AGE / THRILLER]. The me-as-protagonist should have one flaw visible in the first scene that the audience will recognise as genuinely human rather than charming. The opening scene should end on an image, not a line of dialogue.

Why it works: Ending on an image rather than dialogue is the cinematic rule that makes an opening stick — screenwriters know that visual memory outlasts verbal memory.

Best for: A creative reflection exercise, a conversation starter, a fun personal exploration, or simply to see your own story refracted through a completely different creative lens.

97

Game Night Activities

Creative

Design [NUMBER] original games or activities for a [TYPE OF GATHERING: house party / family dinner / team event / date night / kids birthday / work social] with [NUMBER OF PEOPLE] and age range [RANGE]. Equipment constraint: [NO EQUIPMENT NEEDED / household items only / specific items available]. For each activity: (1) the name; (2) setup in 2 sentences; (3) how to play, including how to end; (4) why this specific group in this specific context will enjoy it; (5) the one thing that usually goes wrong and how to prevent it.

Why it works: *The thing that usually goes wrong per activity is the facilitator knowledge that prevents the flat moment where an activity loses energy and the host scrambles to recover it.*

Best for: Planning any gathering where you want genuine connection rather than everyone looking at their phones — especially for groups that do not know each other well or where conversation alone is not enough.

98

Creative Writing Challenge

Creative

Give me a creative writing challenge that will genuinely push me. Include: (1) a specific opening sentence I must use verbatim and may not change; (2) one structural or linguistic constraint that forces a technique I probably avoid (e.g. no adjectives, written backwards, second person only, present tense throughout, no dialogue); (3) a thematic tension I must engage with but do not have to resolve; (4) a word count: [YOUR PREFERENCE or ask Claude to decide]. My style and what I want to work on: [BRIEF DESCRIPTION]. After I complete it and share it, give me feedback on 3 things: what worked, what did not, and one specific sentence I should rewrite and why.

Why it works: *The three-part feedback structure — what worked, what did not, and one specific rewrite — is the most useful critique format because it acknowledges success, names failure, and models improvement concretely.*

Best for: Developing a writing practice, stretching beyond comfortable style and subject matter, preparing for a competition, or simply enjoying the creative discipline of working inside constraints.

99

Personalised Poem for Someone

Creative

Write a poem for [RELATIONSHIP: a partner / parent / friend / child / colleague] for [OCCASION: birthday / farewell / anniversary / new chapter / just because]. Specific details I want woven in: [LIST 4-6 REAL DETAILS — a running joke, something they love, something they have been through, something only this relationship would know]. Tone: [WARM AND FUNNY / TENDER AND SINCERE / BITTERSWEET / A DELIBERATE MIX]. Length: [SHORT: 8-12 lines / MEDIUM: 16-20 lines / LONG: 24+ lines]. It must pass this test: if you removed the person's name and gave it to a stranger, they would know it was not for them.

Why it works: *The stranger test is the clearest standard for what makes a poem genuinely personal rather than beautifully generic — it is the threshold that separates a real gift from a polished card.*

Best for: Birthdays, farewells, anniversaries, new beginnings, or any occasion where a personal poem would mean more than anything you could buy — and where it will be kept, not discarded.

100

Collaborative Story

Creative

Let's write a story together. You write the opening paragraph — 120-150 words — that establishes a character, a world, and a problem that immediately creates tension. Then I write the next paragraph, and we alternate. House rules: each contribution must genuinely advance or complicate the story (no stalling or restating); you may introduce a new character, complication, or surprise on your turn; neither of us may kill or resolve a character the other has introduced without giving them a meaningful scene first; and neither of us may end the story on our turn without the other's agreement. Write the opening paragraph now.

Why it works: *The house rules create genuine creative friction that forces both contributors to invest rather than play it safe — the story becomes something neither person could have written alone.*

Best for: A creative session with a writing partner, a classroom exercise, a solo warm-up, or simply the pleasure of a story that genuinely surprises you because you do not fully control where it goes.

The prompt is the skill.

The more precisely you ask, the more powerfully Claude answers.
